

# Sun City Palm Desert Computer Club

Doug Lindal -

## macOS High Sierra

A copy of these slides will be available, so  
don't bother with notes - sit back and enjoy!  
And please silence your cell phone!!

1

## macOS High Sierra

macOS High Sierra  
**Your Mac. Elevated.**

Most of the improvements are  
"under the hood"  
A maintenance release.

macOS High Sierra  
**Your Mac. Elevated.**

These minor maintenance upgrades are  
easy to identify: Leopard became Snow  
Leopard; Lion became Mountain Lion;  
Yosemite became El Capitan and now  
Sierra becomes High Sierra!

3

macOS High Sierra

New technologies at the heart of the system make  
your Mac more reliable, capable, and responsive —  
and lay the foundation for future innovations.  
macOS High Sierra also refines the features and apps  
you use every day. It's macOS at its highest level yet.

Of course, Apple's sees it a little differently!

4

Get a boost with new technology.  
macOS High Sierra introduces new core  
technologies that improve the most  
important functions of your Mac.

**64**

**Advanced.** A new 64-bit architecture is designed for today's flash technology and ready for tomorrow's new storage capabilities.

**Responsive.** Designed to make common tasks like duplicating a file and finding the size of a folder's contents happen instantly.

**Safe and secure.** Enjoy even more peace of mind with built-in encryption, crash-safe protections, and simplified data backup on the go.

## Apple File System.

Your data is under new management.

All Macs with SSDs\* convert automatically to APFS\*\*, that brings a new level of security and responsiveness.

\*Solid State Drives (most laptops & new desktops)    \*\*Apple File System

Up to  
**40%**  
better compression

**HEVC** The new standard for video.

With the rising popularity of 4K video, a new industry standard arrives on Mac — HEVC (High Efficiency Video Coding, or H.265). It can compress video up to 40 percent more than the current standard. Videos stream better and take up less space, while preserving the same visual quality.

7

No clunky VR glasses for Mac.

Virtual reality for Mac. A brave new world is coming.

Interactive virtual reality experiences is coming on Mac for the first time, using the new iMac with Retina 5K display and the new iMac Pro coming early in 2018.

But it's not all 'under the hood'!

Your favorite apps and features get a boost, too. Navigate, organize, and edit your photos like never before with new features in the Photos app. Tailor your web browsing experience in Safari. Find what you're looking for faster in your Mail inbox.

9

**Photos**  
More ways to edit.  
More ways to organize.  
More ways to wow.

People love working with their photos. So macOS High Sierra is focused on giving you new tools that make organizing and editing more efficient and fun.

10

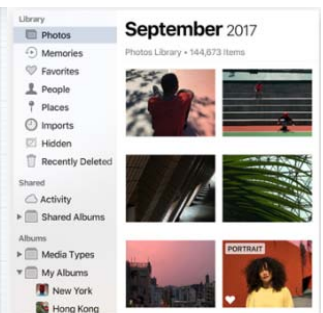

Hooray! The Auto Enhance button is now on the main Photos screen

Simple changes are often the best. Apple has moved the Auto Enhance button to the main screen, it's no longer necessary to click EDIT to use it.

11

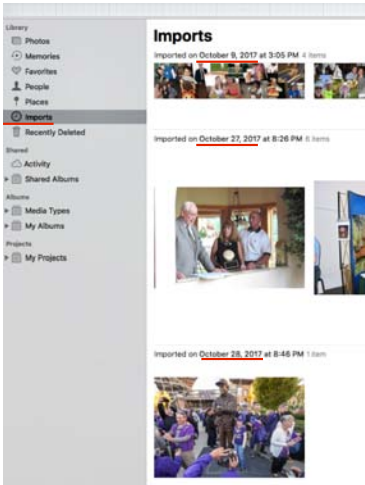

**Expanded sidebar.**  
Always at the center of everything.

Quickly find what you're looking for with the always on sidebar. And the Albums you create are always on top of the list.

12

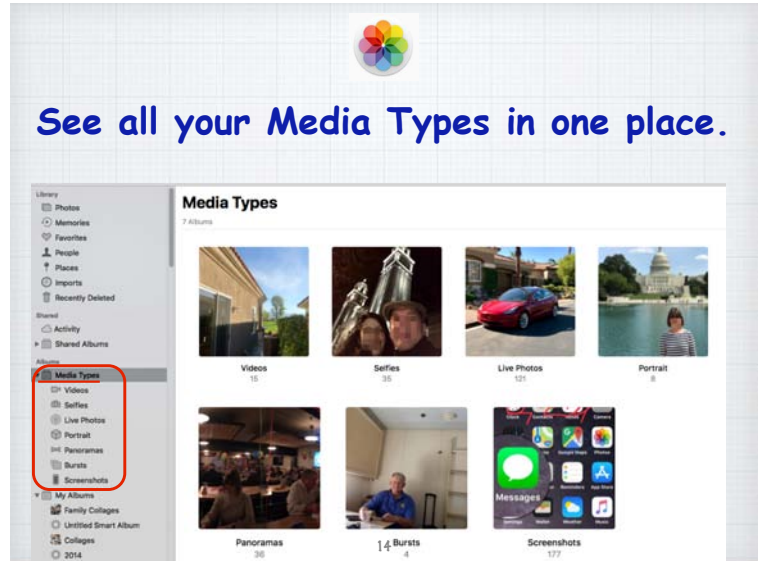

13

See all your Imported photos at once.

A new Imports view shows not just the latest batch of imported photos - but the batch before that, and the batch before that.

See all your Media Types in one place.

Enjoy your Memories in Photos.

Rediscover forgotten moments. Your library is auto scanned for significant people, places & holidays - presenting them in curated collections called Memories.

15

Organize your photos in a flash.

Instantly filter photo collections by your favorite criteria. Select Favorites, Videos or create your own Keywords like Christmas. (Just click in upper right corner of your screen)

16

17

Perfect your best shots with advanced free editing tools.

Make sophisticated contrast and color adjustments to your photos with powerful new editing tools.

Bring more life to your Live Photos!

Try Long Exposure for a dreamy water blurring effect. Use Loop to turn it into a looping video to watch over and over. Try Bounce to play the action forward and backwards.

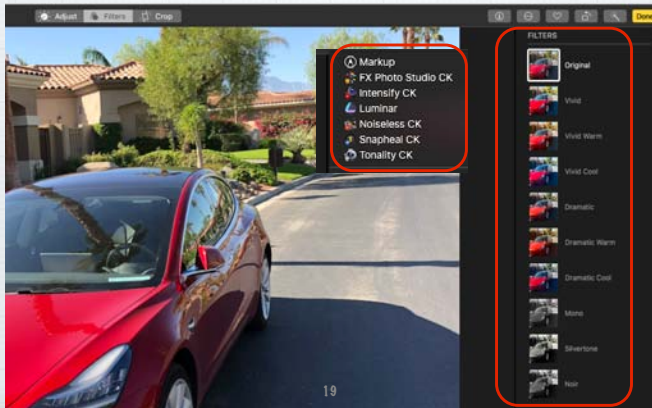

Select your Key Photo. Turn sound on or off. Trim the length.

18

## Use dramatic Filters or bring in 3rd party App Store apps to edit.

19

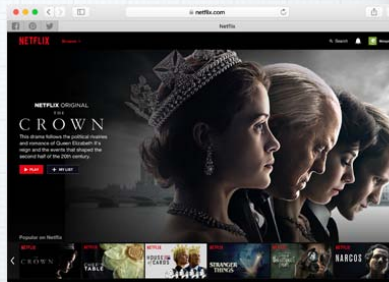

20

The People album gets even better. Larger images and more accurate groupings. And with iCloud Photo Library, your album stays up to date on all your devices.

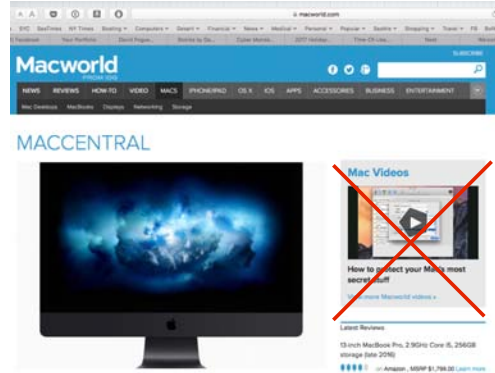

## Safari Upgrades

Apple continues to work on its Safari Web browser - now the world's fastest Internet Web browser.

It also uses less power. Apple claims that you can watch Netflix for two hours longer in Safari on your MacBook.

21

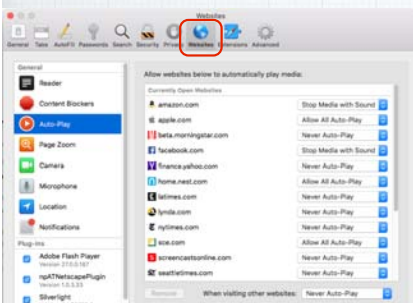

No more auto-play videos!

Now Safari keeps unexpected and unwanted videos with audio from playing, so you can surf the Web in peace.

22

## Customize your favorite websites.

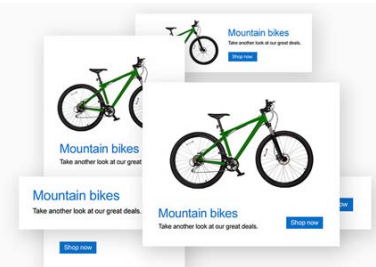

Go to the Websites tab in your Safari Preferences.

Personalize your browsing experience in Safari by enabling settings for individual websites - Reader, Content Blockers, Auto-Play, etc.

23

## Intelligent Tracking Prevention.

Remember looking at a green mountain bike on-line, then having the ads follow you everywhere! Safari now identifies advertisers and leaves cross-site tracking data behind.

24

**Jet Blue 670**

Tap Spotlight magnifying glass and enter flight info.

**Track your flight with Spotlight**

Enter your flight number to see arrival and departure times, terminals, gates, delays or maps. (Or just use Siri!)

**Copy and Paste across different devices.**

**Copy from Safari on your Mac ...**

**Paste to Pages on your iPad!**

Works with all Apple devices with all apps.

**Siri has learned some new tricks!**

Activate Siri by clicking the icon in either the far right of your top Menu Bar or in your Dock.

**Ask Siri in English how to say something in Mandarin, Spanish, French, German, or Italian - Siri will translate the phrase. More languages coming.**

**Siri as your personal DJ on your iPhone or your Mac**

**Apple Music knows your tastes. So when you tell Siri to 'play something I like', you'll hear a song you love.**

**Siri can also answer music trivia questions like 'Who's the drummer in this band?'**

**Share WiFi Passwords.**

Wi-Fi passwords can be a pain to remember. Now, if a friend's (someone in your Contacts List) iPhone running iOS 11 tries to join a Wi-Fi network that you're connected to, your own iPhone or Mac will get a simple pop-up asking if you'd like to share the network's password.

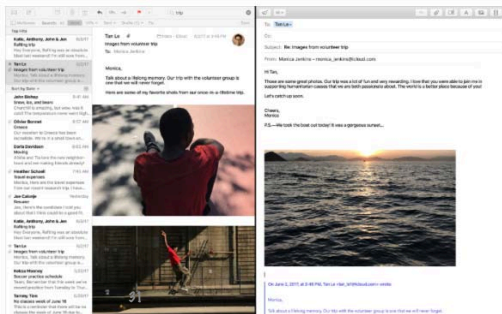

**Top Hits - a smarter way to search your emails.**

**Search on RMUG and see the 'Top Hits'**

**Mail now delivers suggestions for searches with a Top Hits selection that reflects the mail you've read, the senders you reply to, your VIPs and more - while storing your messages in 35 percent less disk space.**

When Mail is full screen, messages open in Split View by default so it's easy to read and write messages and access your Inbox at the same time.

Access Full Screen mode by clicking on the green button in the top left of your window. It's great for small screen laptops!

Pin your high priority Notes to the top of your list.

Your notes are normally listed in order of their last use, but now you can 'pin' your most important notes to the top of the pile.

Click to open Tables

November 26, 2017 at 5:51 PM

Table Example

Date	Units	Price
11/17/17	2	\$3.00
11/18/17	5	\$4.50
11/19/17	3	\$5.00

Add Tables to Notes.

You can now add a table to a Note for clearer views. Great for committee assignments, golf scores, and so on.

Now sort through your Notes for images and attachments.

Click to open all attachments

Sort by photos, Images or Documents

And that's about it for MacOS High Sierra

As I stated to begin with, most of the improvements are "under the hood" in this important maintenance release.
