

## How to find your parked car with Maps

With iOS 10, *Maps* marks the location of your car with a pin when you walk away and your iPhone disengages from the Bluetooth link in your car—so you can easily find where you parked.

You need an iPhone 6 or later and iOS 10 to use this *Maps* feature. Also, one time only, verify the following *Settings* for this to work:

- Turn on Location Services. *Settings* → *Privacy* → *Location Services* → *On*.
- Make sure that Frequent Locations is on. Go to *Settings* → *Privacy* → *Location Services* → *System Services* → *Frequent Locations* → *Frequent Locations* → *On*.
- Turn on Show Parked Location. Go to *Settings* → *Maps* → *Show Parked Location to the On*.
- Make sure that your iPhone is paired to CarPlay or Bluetooth in your car. *Settings* → *Bluetooth* → *On*, then add your car (check your car's user's manual on how to do this).

When you leave your vehicle, your iPhone disconnects from Bluetooth, which causes *Maps* to mark the location of your car.

### Find your car

When you're ready to go back to your car, follow these steps:

1. Open *Maps*.
2. Tap the *Search* field, then choose *Parked Car* from the suggestions list.
3. Tap *Directions* and choose *Drive, Walk, or Transit*.
4. Select the route that you prefer. When you are ready, tap *Go*.

Or save time and screen taps - just ask "**Siri, where is my car parked!**"

To remove a Parked Car pin, tap on the map. Then swipe up on the menu card, and tap *Remove Car*. *Maps* won't mark your parked car if you frequently park in the same location, like at home or work.
