An Introduction to MobileMe

Why use MobileMe?

Everything you need, all in one place.

Me.com gives you a full suite of ad-free web applications — Mail, Contacts, Calendar, Gallery, iDisk, and Find My iPhone* — all accessible from a browser on any Mac or PC. Check your email, add new contacts to your address book, manage your calendar, create an album of your vacation photos, and access and share those big presentation slides. Even locate your lost iPhone or iPad. Just sign in at www.me.com from any computer.

MobileMe - Your Storage Area on "The Cloud"

What is The Cloud?

Just Apple's fancy name for huge data banks you can access on the Internet.

You receive 20 GB of storage, enough for 7,000 high resolution photos or a million e-mails & text.

Accessible at: www.me.com

On MobileMe at www.me.com -
You can read your e-mails, check your Calendar or find Contact information in your AddressBook on any computer connected to the Internet.

But in this age, that is not so important.
Many of us use our McBook, iPhone or iPad for these tasks when away from home.

Far more important to me is the auto-synchronization that occurs.

When I make an addition to my calendar or Contacts on my iMac, it automatically appears on my wife's MacBook, our iPhones and iPad.

And visa-versa, instantly! I'm always up to date.

You can also do this by manually syncing in iTunes, but this is a huge daily hassle.

The same for finding documents I have stored.

This is very valuable when you have homes in Palm Desert and in Seattle, as well as a boat.

No more worries about backing-up up files (although I still use Time Machine!) or storing important files on a Thumb Drive.

To this, add the extra goodies Apple throws in:

> Photo Galleries

> Public Sharing of Files & Photos

> Find my iPhone (or iPad)

I couldn't imagine life without MobileMe!

Enough of the talking,

let's take a tour .....

Me.com. The website that's all about you.

At work, at home, or at a friend's house, me.com gives you easy access to your most important stuff — email, contacts, calendars, photos, and files — from one place on the web. And since any changes you make on me.com are stored in the cloud, you can see them on all your other devices, too.

Sign in to me.com from any computer, Mac or PC.

The easy way to keep your iPhone, iPad, Mac, and PC in sync.

It automatically syncs your email, contacts, and calendars over the air across all your devices. It helps you find your lost iPhone or iPad. And that's just the beginning of what MobileMe can do for you.

www.ME.com

Works with the desktop applications you know well.

MobileMe keeps your data in sync across the applications you use every day — Mail, Address Book, and iCal on a Mac; Microsoft Outlook on a PC (Windows 7, Windows Vista, or Windows XP); and the built-in apps on your iPhone, iPad, or iPod touch. All your information stays up to date and is right where you want it, so there's no need to learn new software or change your day-to-day routine.

Mail, Contacts & Calendar were the original sections

But today there are six sections to MobileMe

MobileMe Sign In

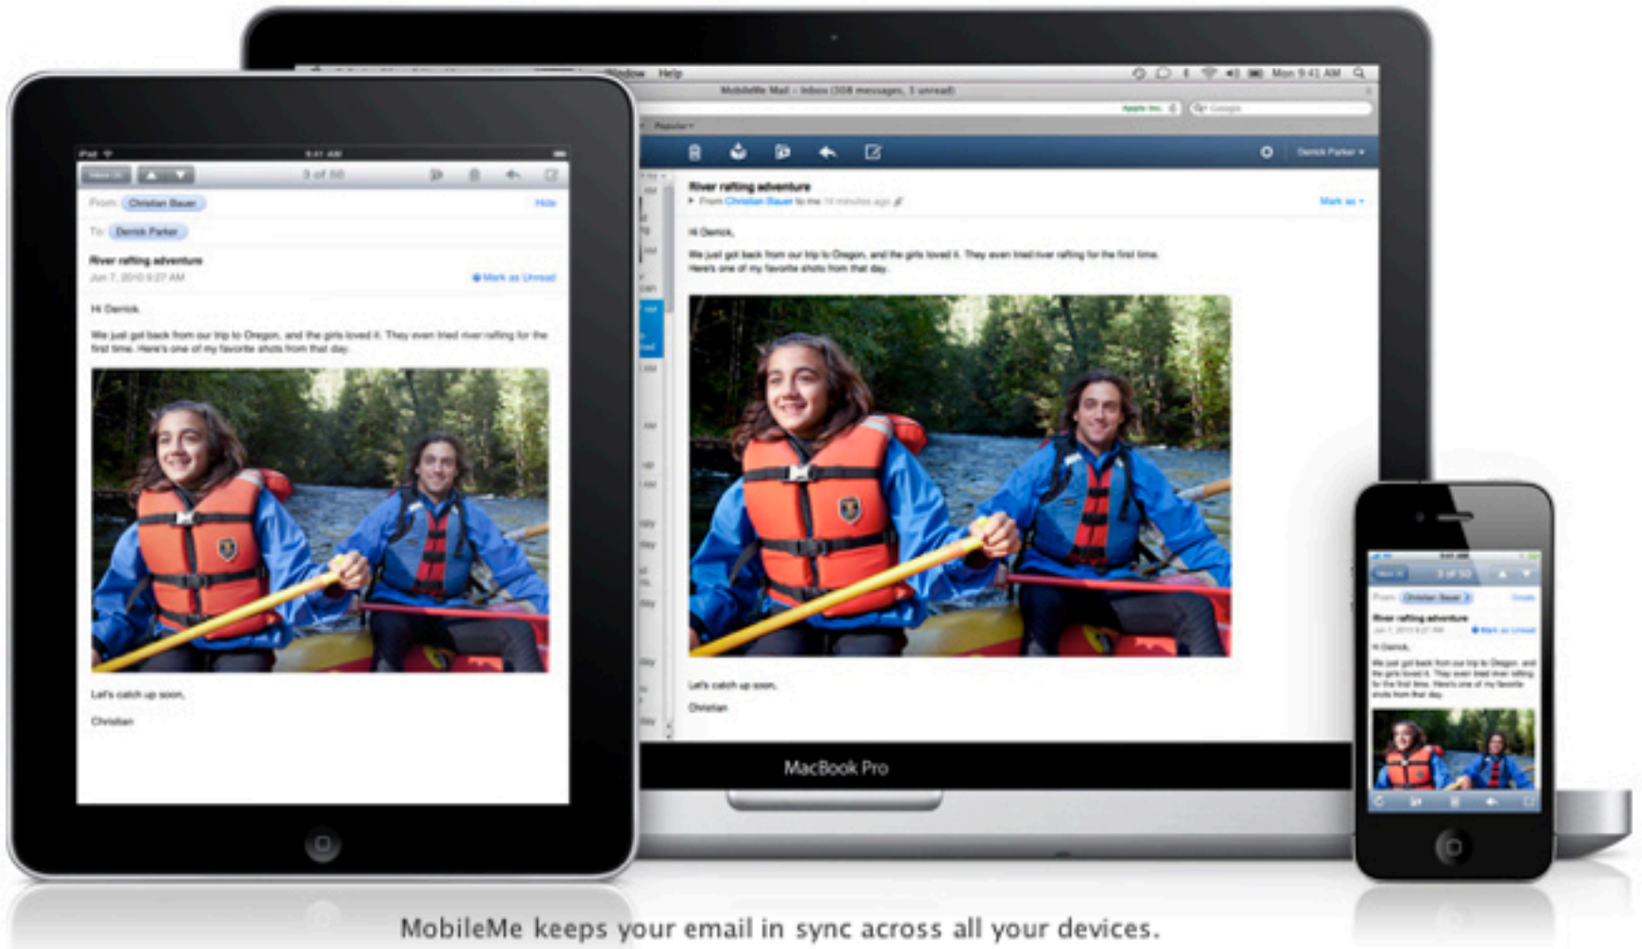
Once you open MobileMe You have six choices, we'll explore **Mail** first …

Mail



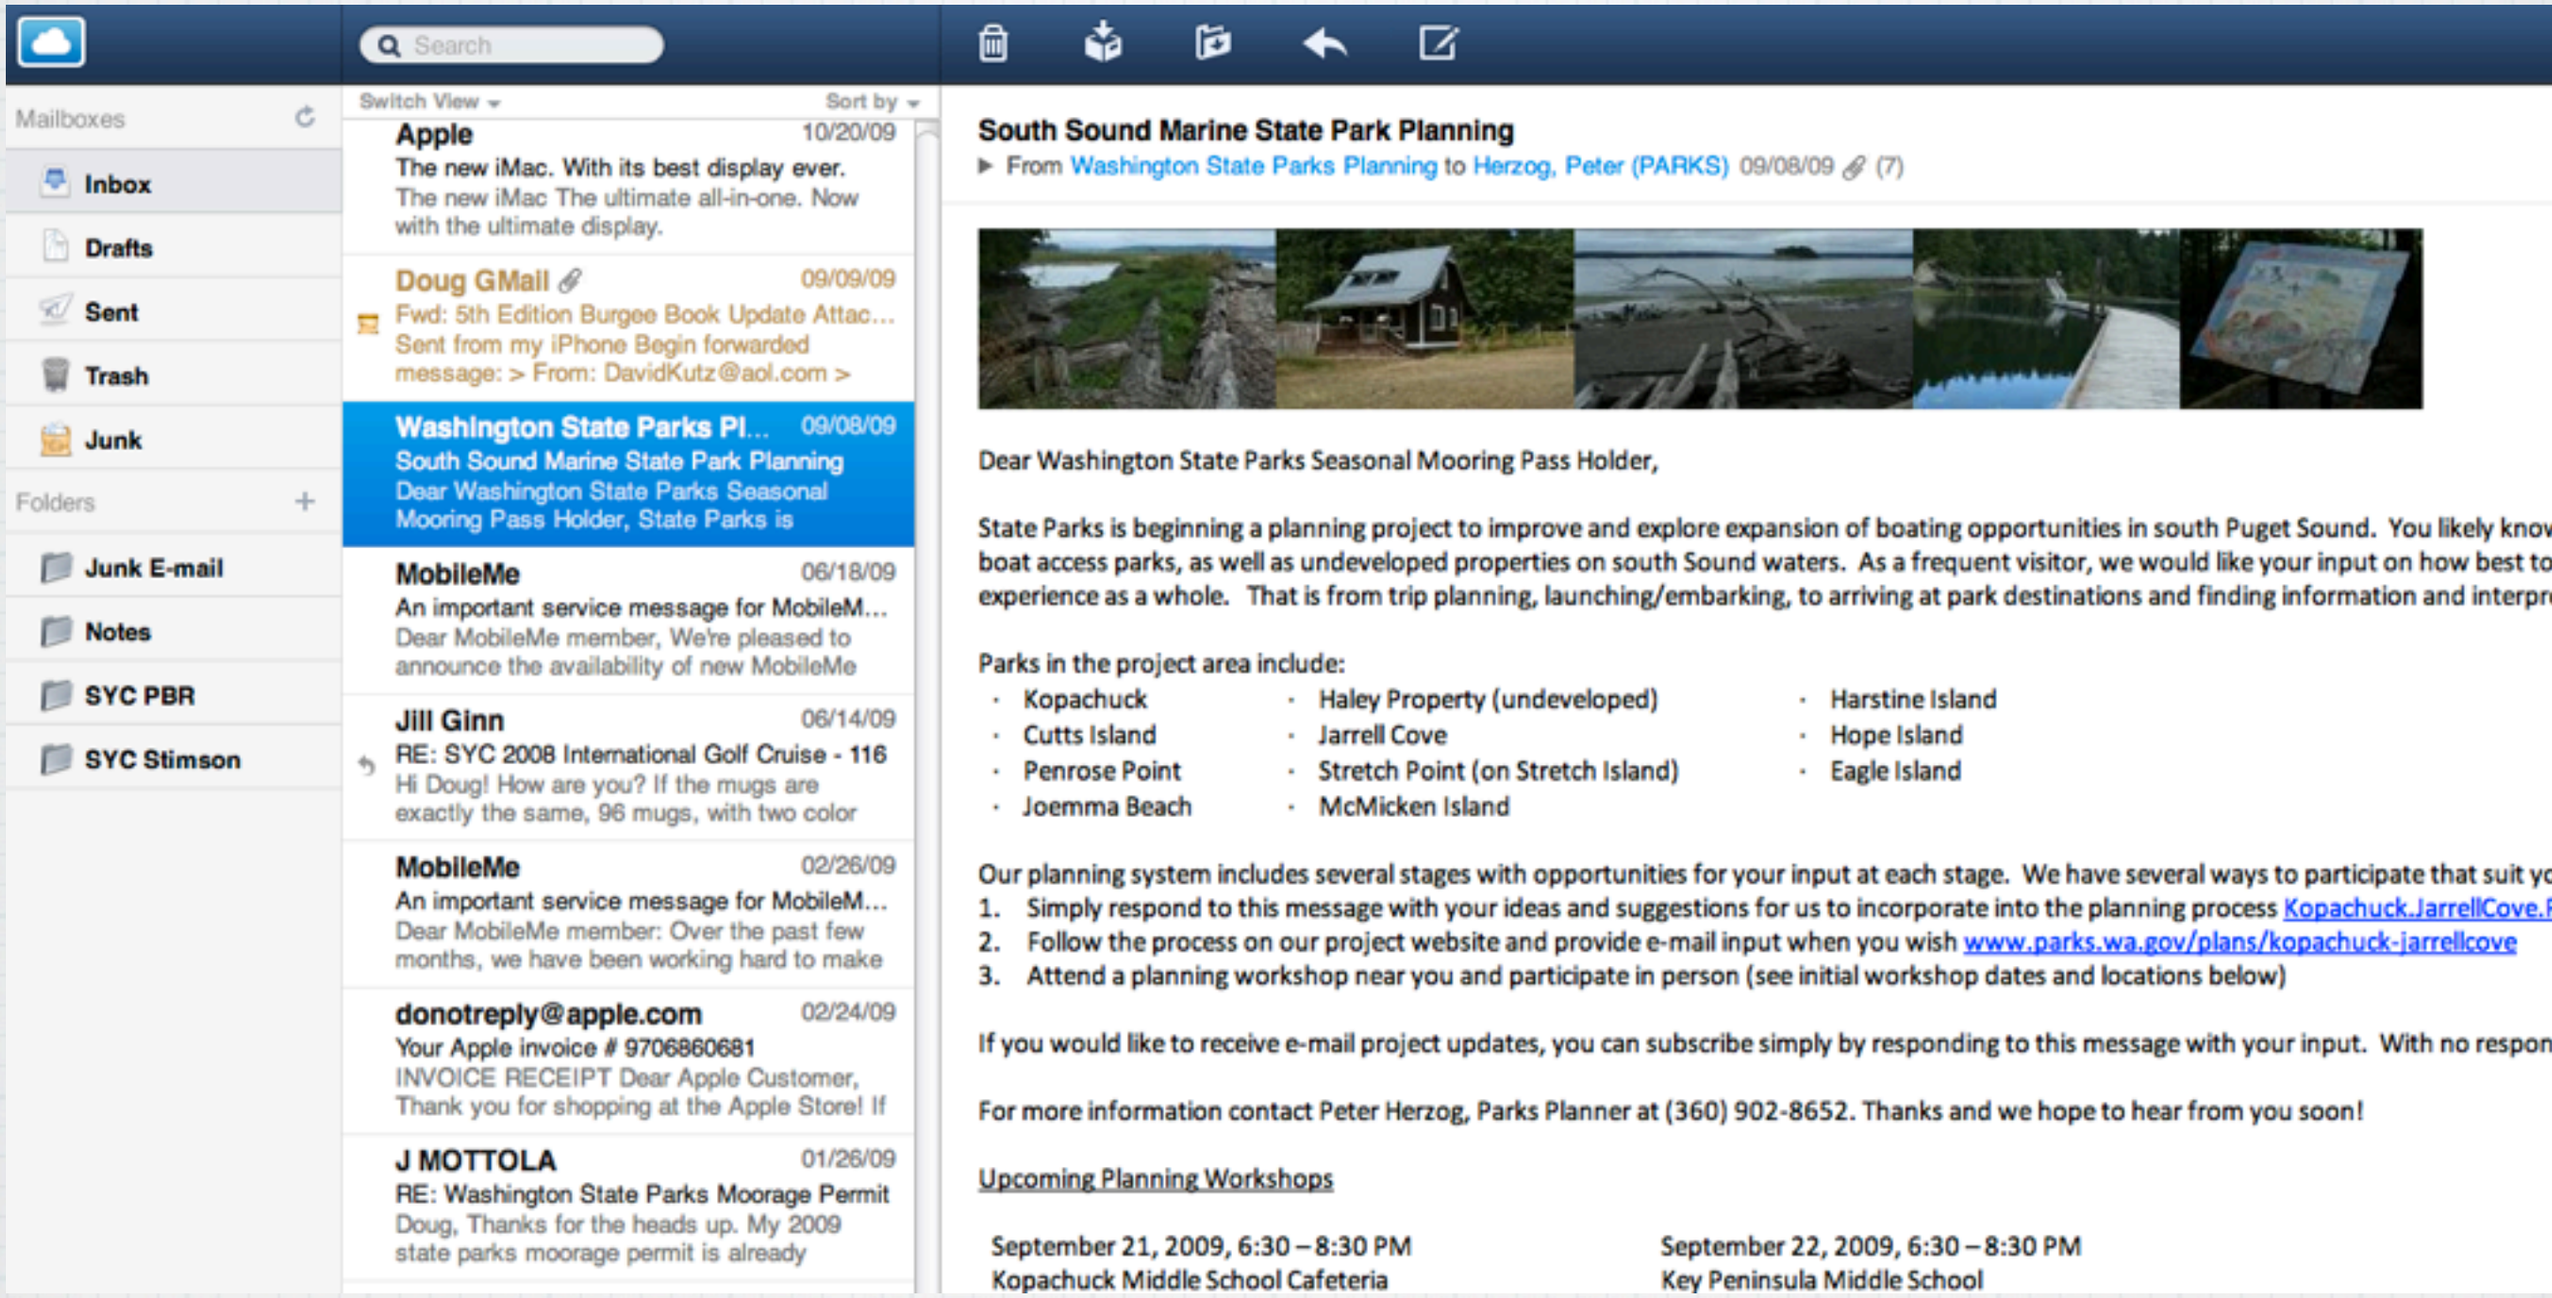
MobileMe keeps your email in sync across all your devices.

Email that's always in sync.

When you join MobileMe, you get a me.com email account that's always up to date and in sync, no matter where you check it. MobileMe constantly looks for new messages, so you don't have to. They're pushed to your iPhone, iPad, and iPod touch automatically, and you're notified as soon as they arrive.

You'll also notice that the inbox on your iPhone or iPad looks a lot like the inbox on your Mac or PC. That's because it is. Read messages are marked as read, and all your folders are exactly the way you left them. Your inbox includes spam and virus protection. And you can access your MobileMe email from anywhere via a powerful, ad-free webmail app at me.com.

Click on the "Cloud" then Mail to open MobileMe Mail



MobileMe allows you to open your Mail from anyone's computer

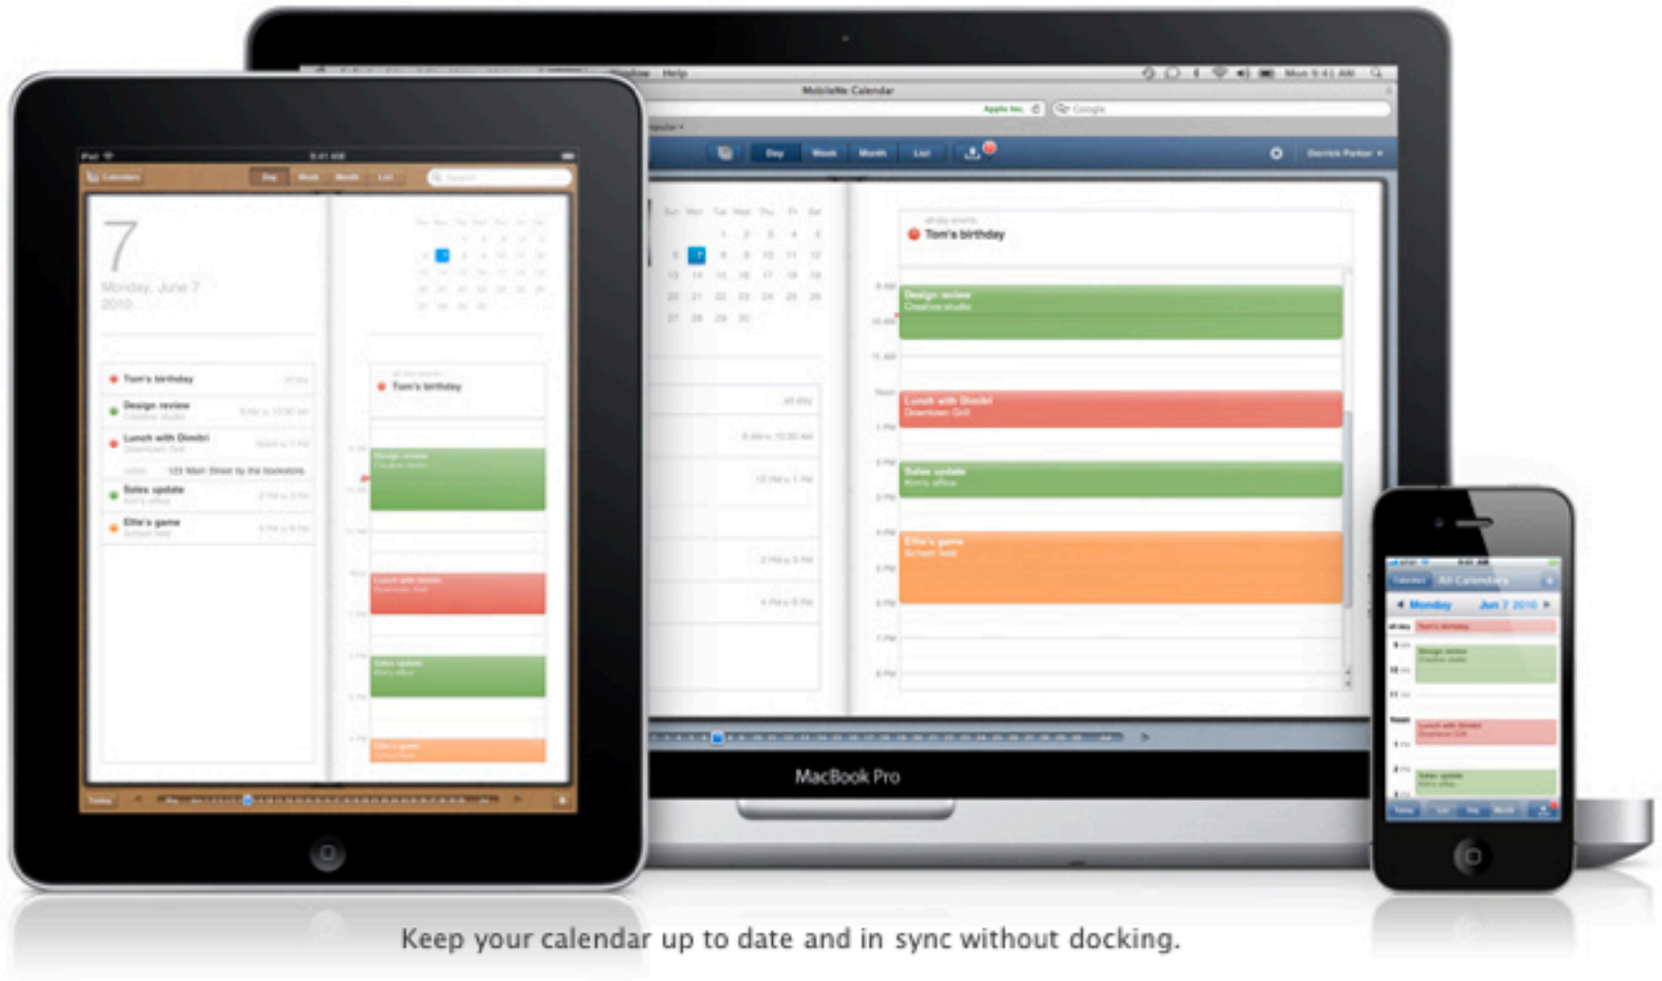
Your Calendar on MobileMe

Calendar UPDATED



Keep your calendar up to date and in sync without docking.

Manage your schedule, not your devices.

MobileMe keeps your calendar in sync across your iPhone, iPad, Mac, and PC, and on the web at me.com, so you always know where you need to be and when you need to be there. Change the time for your doctor's appointment on your computer at work, and it updates on your iPhone or iPad — no docking required. Add an event on your iPhone or iPad and it automatically appears in the Calendar application on me.com. You can even share calendars with friends and family who are MobileMe members. As soon as someone adds or edits an event, it syncs over the air across everyone's devices. So you'll never miss a lunch date, soccer game, or important meeting again.

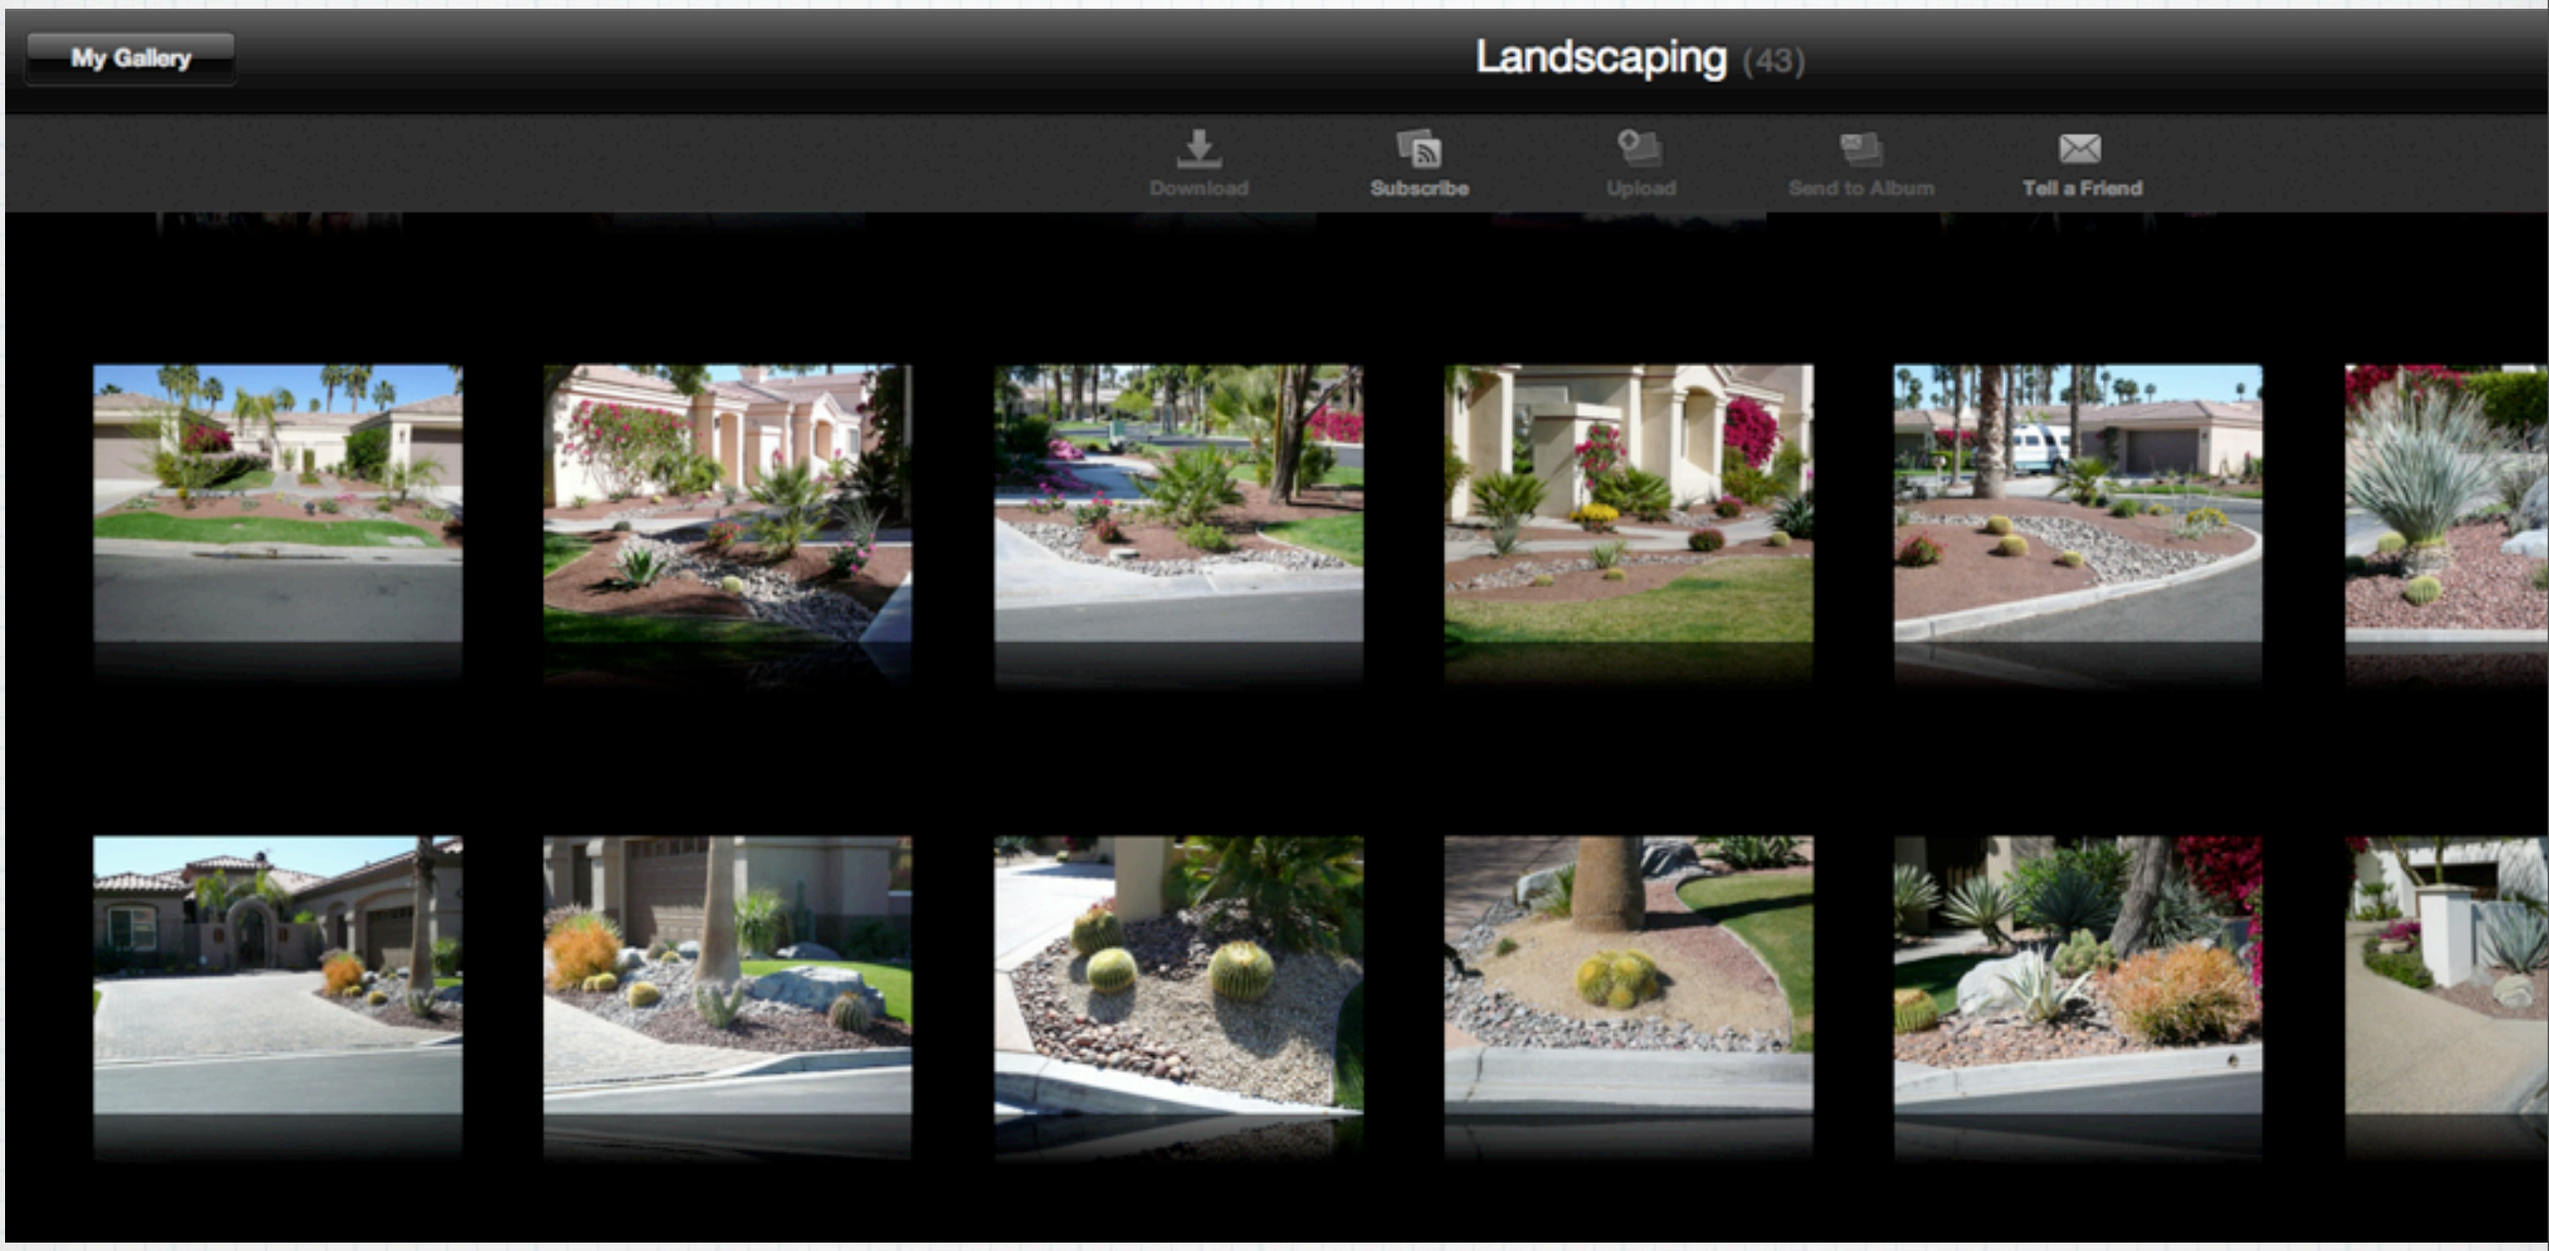
Publish your Photo Albums on MobileMe

The better way to share photos.

When your friends and family visit your MobileMe gallery, they're in for a show. Just upload photos from your computer, iPhone, or iPad and invite people to visit, download their favorites, or contribute their own. And for a whole new way to browse photos on the go, download the MobileMe Gallery app for iPhone, iPad, and iPod touch.

Create a beautiful web gallery of your photos and share them in just a few clicks.

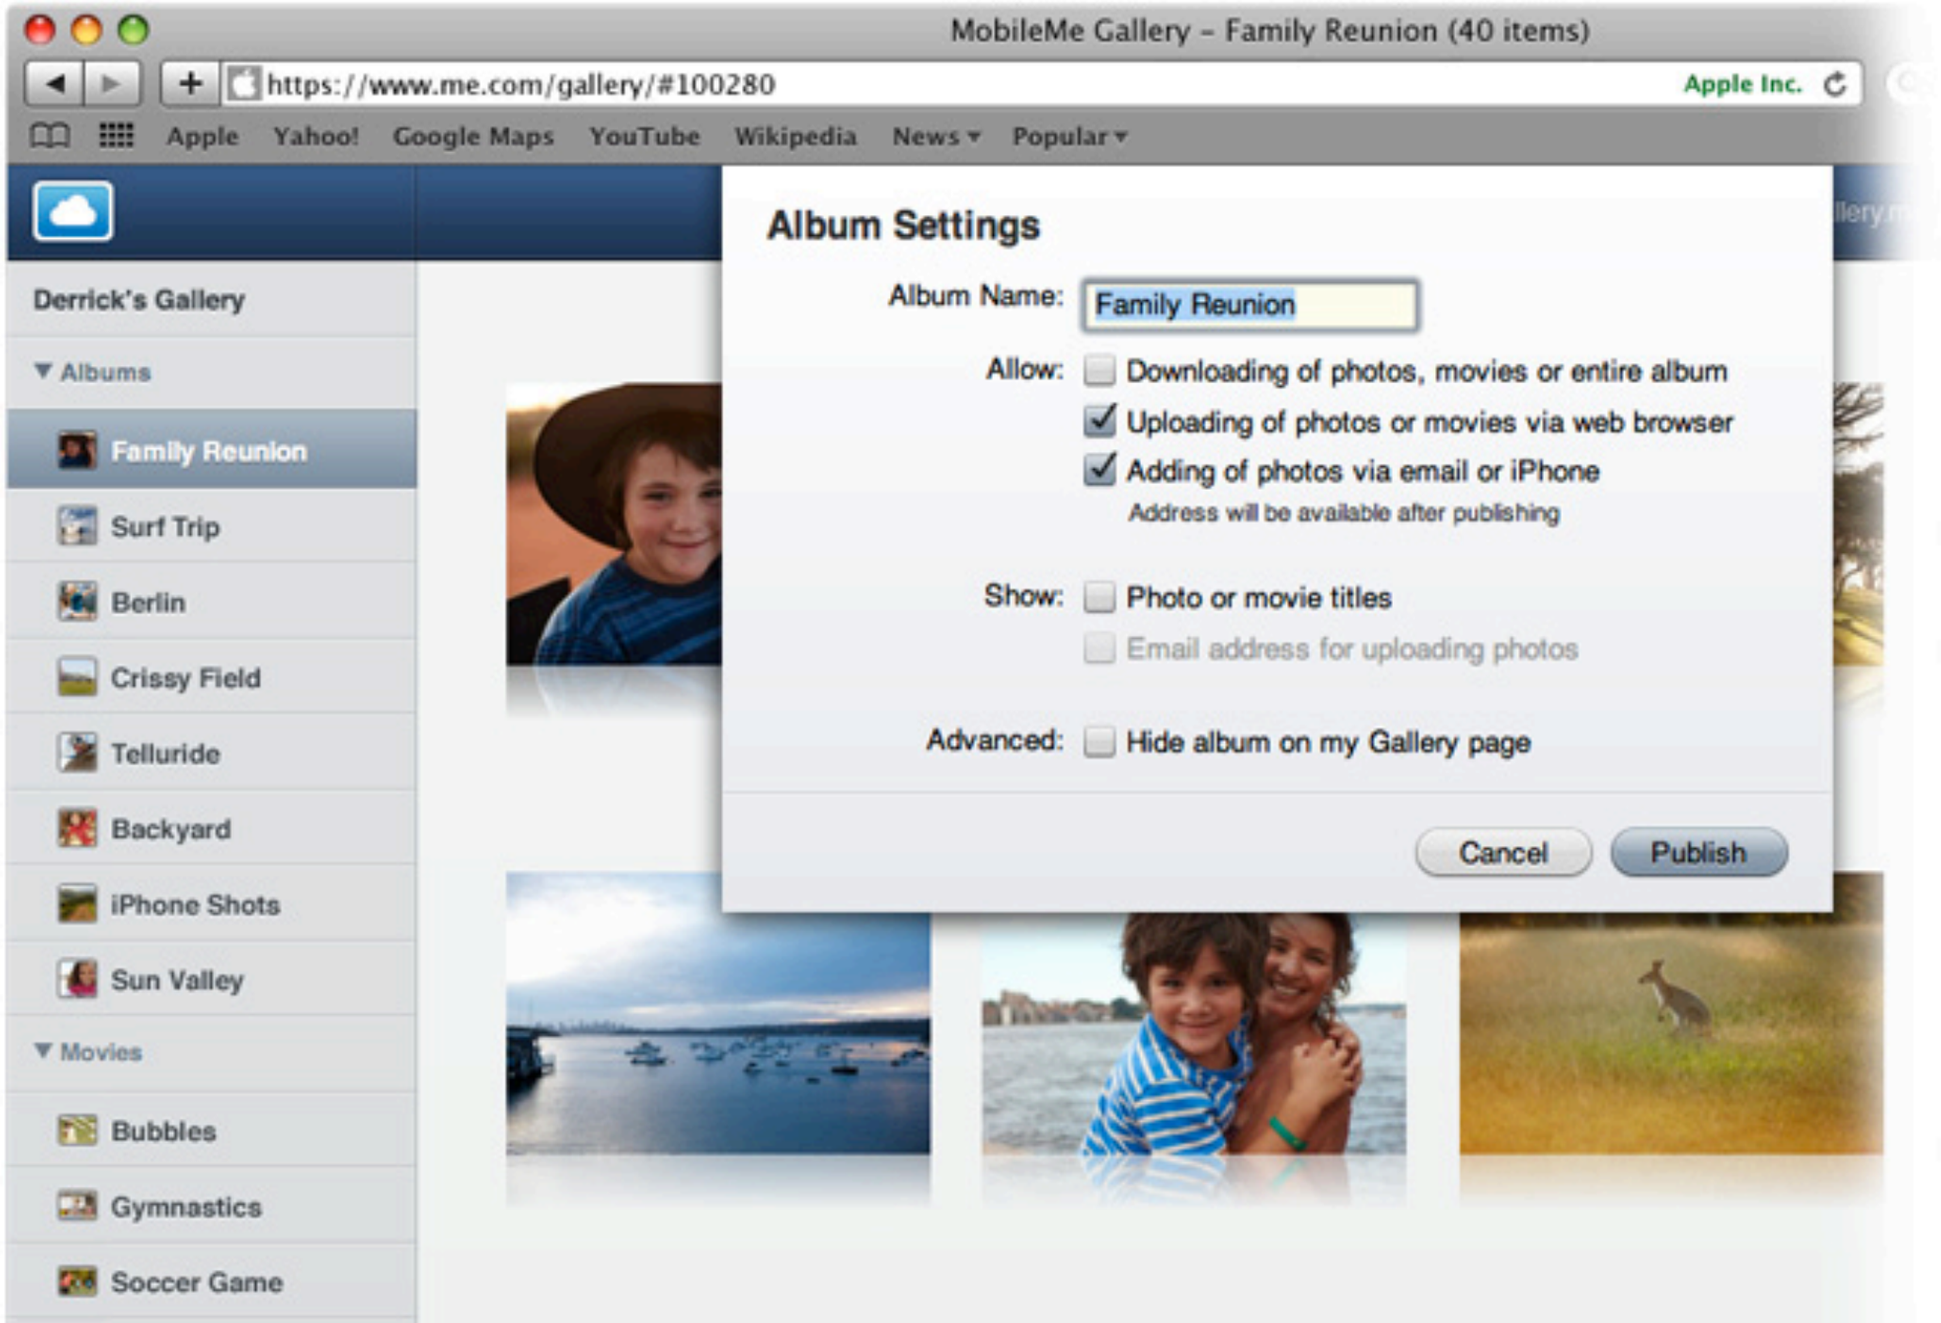


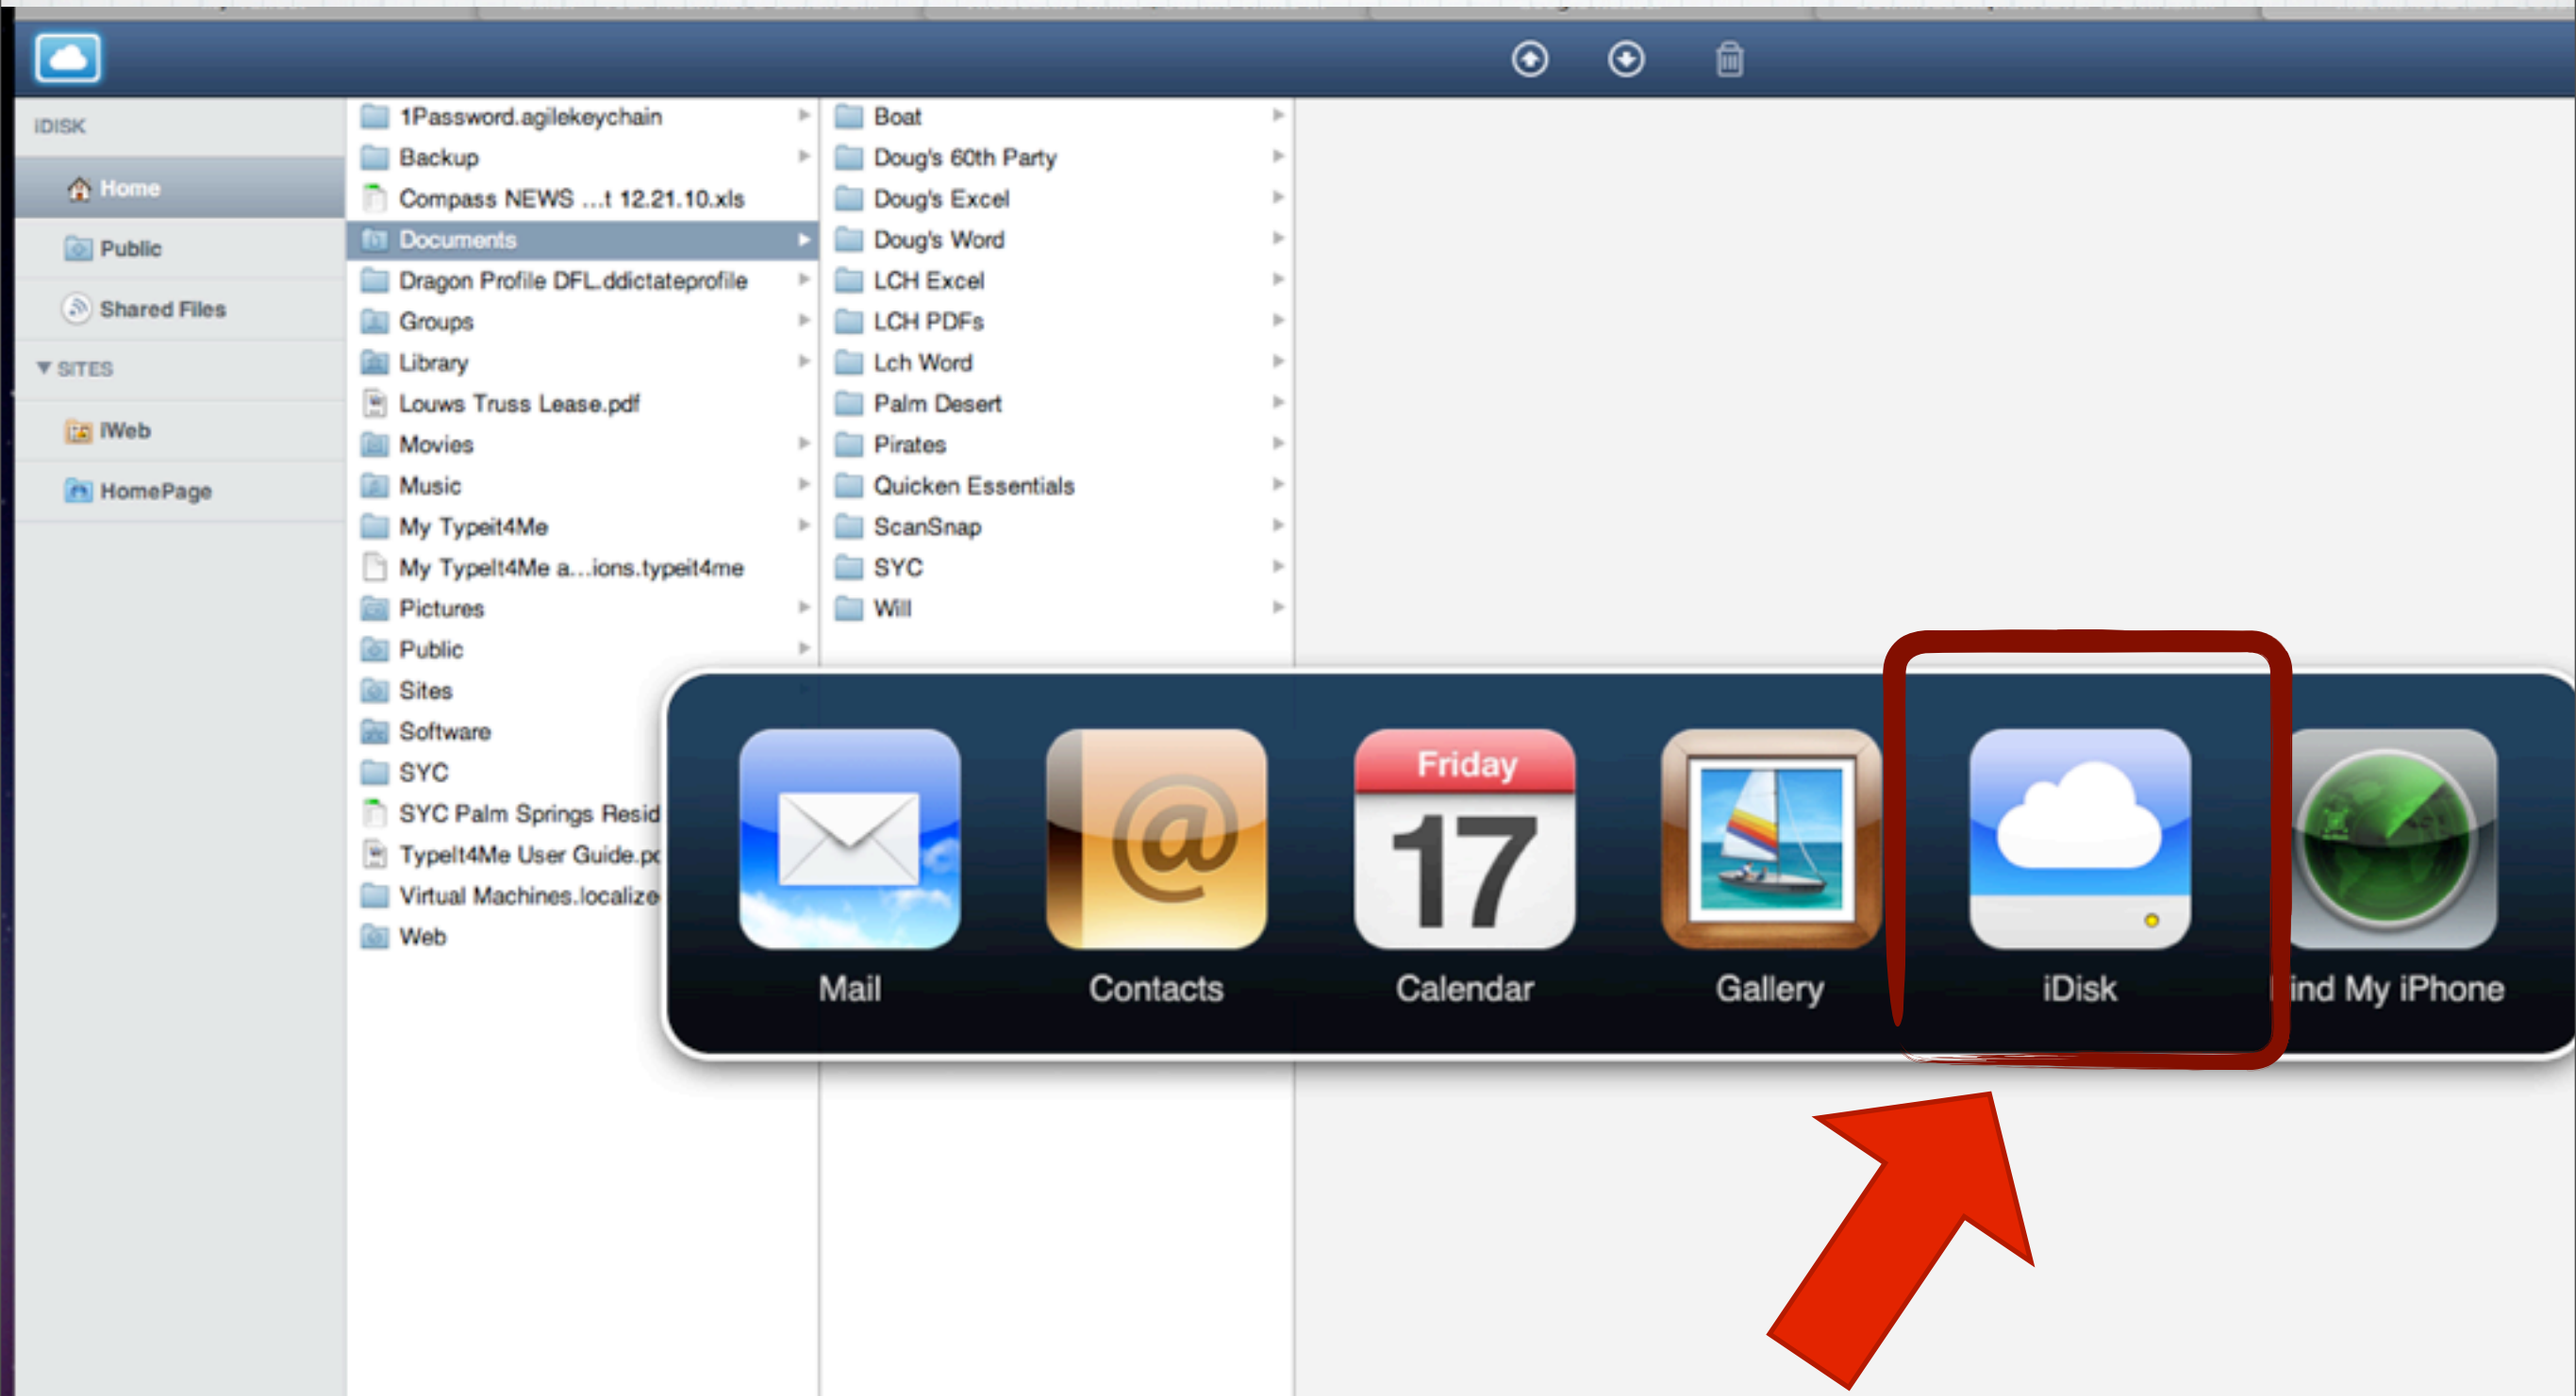
View my Public Photo Gallery at:

https://gallery.me.com/douglindal

Print-quality downloads.

You can allow visitors to download high-resolution copies of their favorite photos right from their browser on a Mac or PC. If they want the entire album, it's as easy as one click. MobileMe compresses the album into a ZIP file for a quick and simple download.





My Hard Drive @ www.Me.com

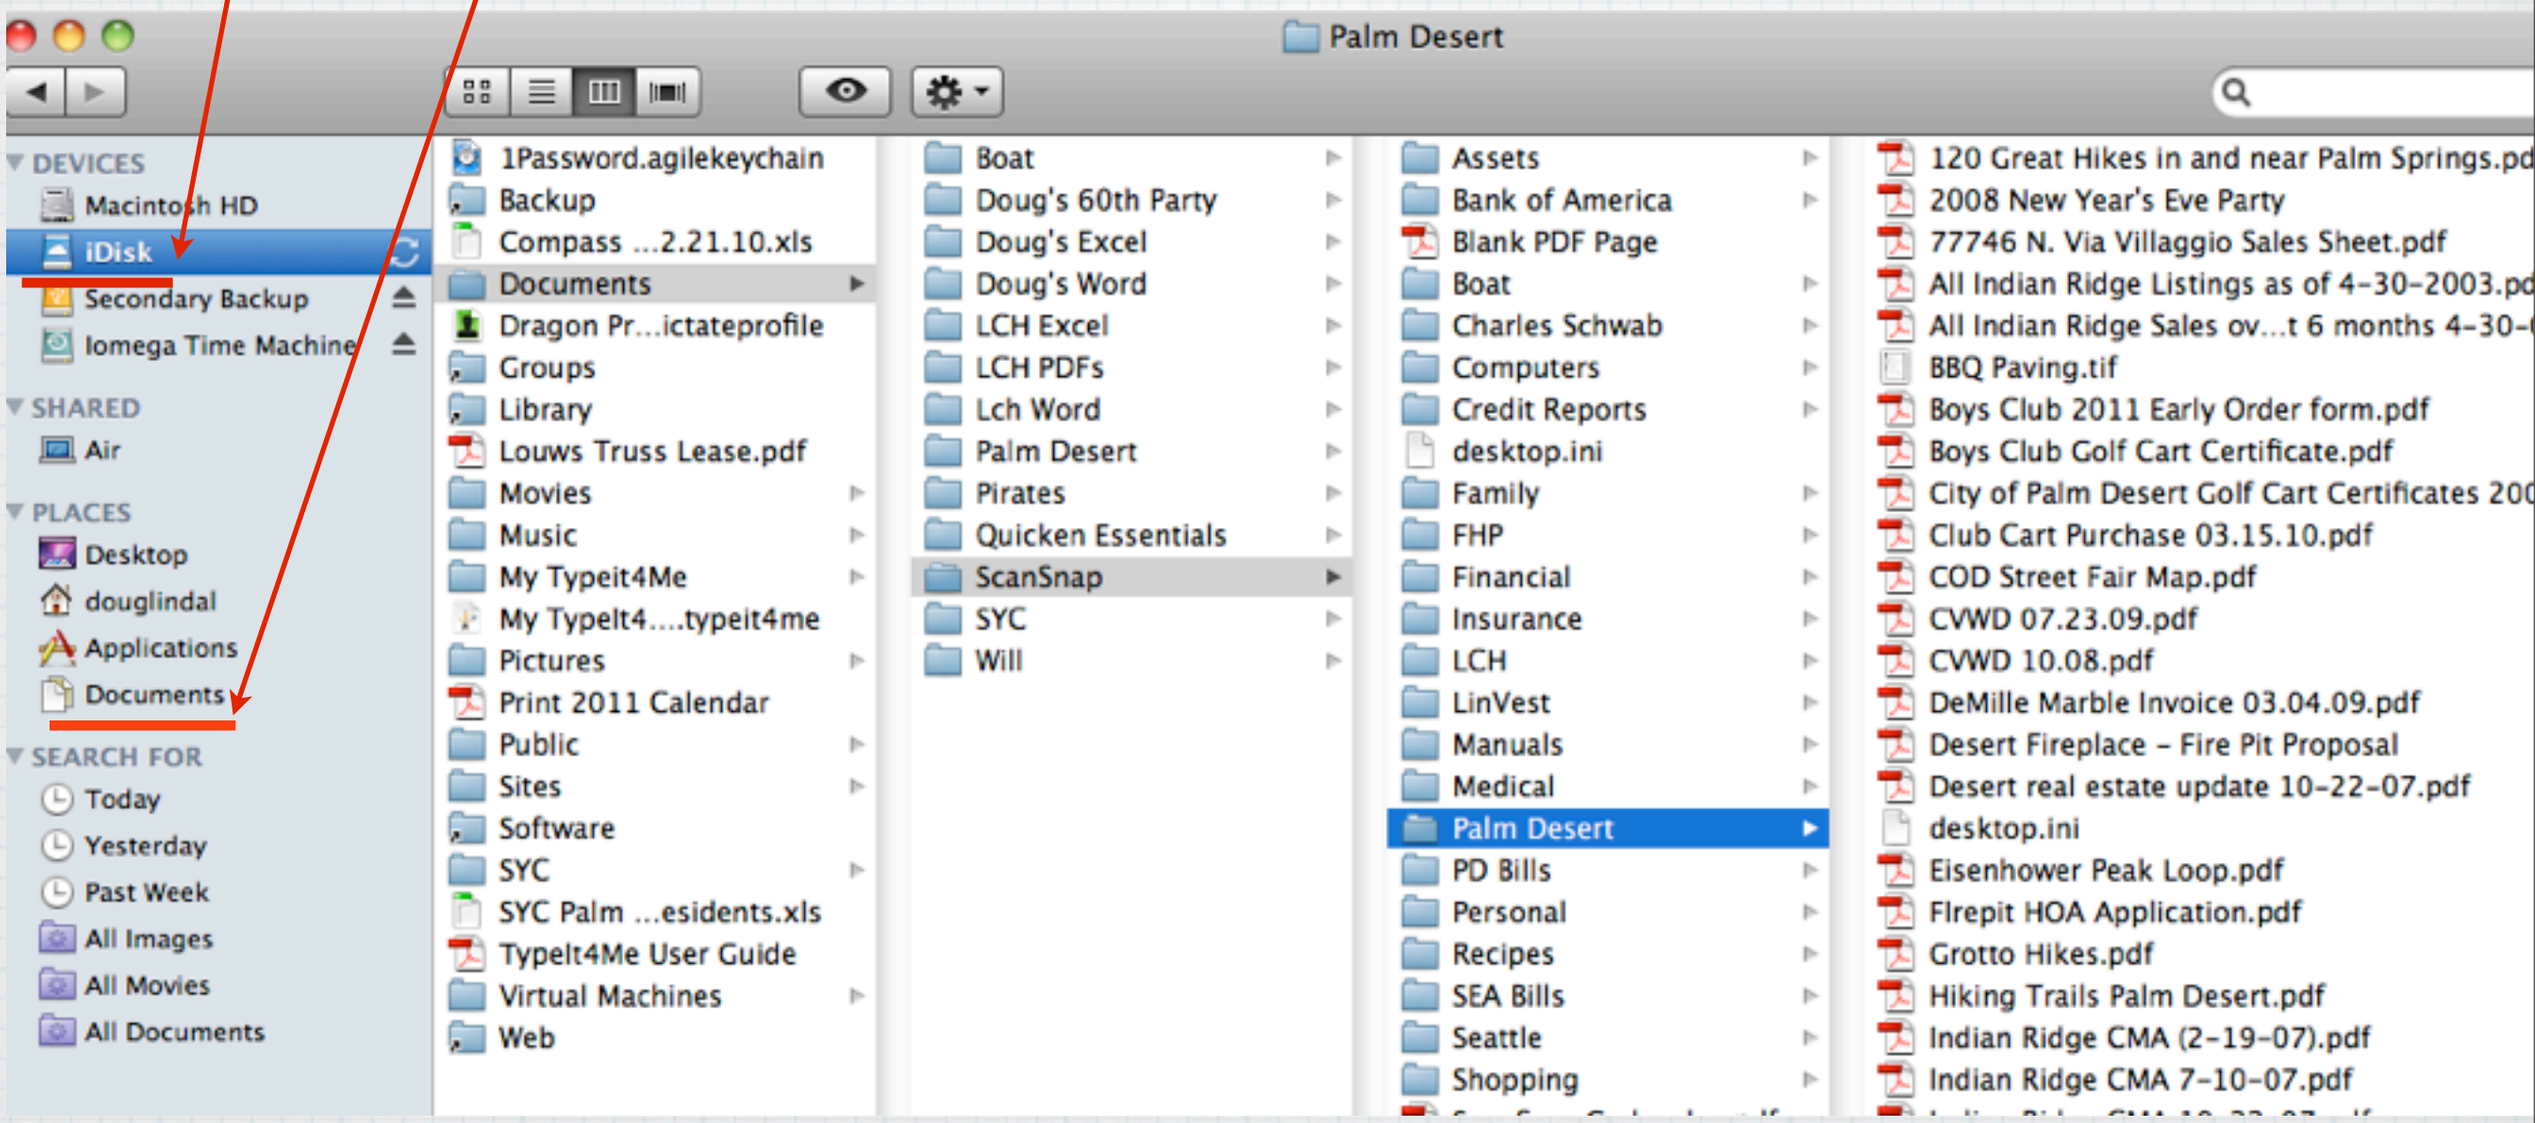
Your hard drive on the web.

With MobileMe iDisk, it's easy to store, access, and share files online. You have plenty of storage space — even large files are no problem. Just add the files you need to your iDisk, and whatever you upload will be there for you to download using a web browser on any computer or using the iDisk app for iPhone, iPad, or iPod touch.

Store and share important files on the web at me.com or by using the iDisk app.

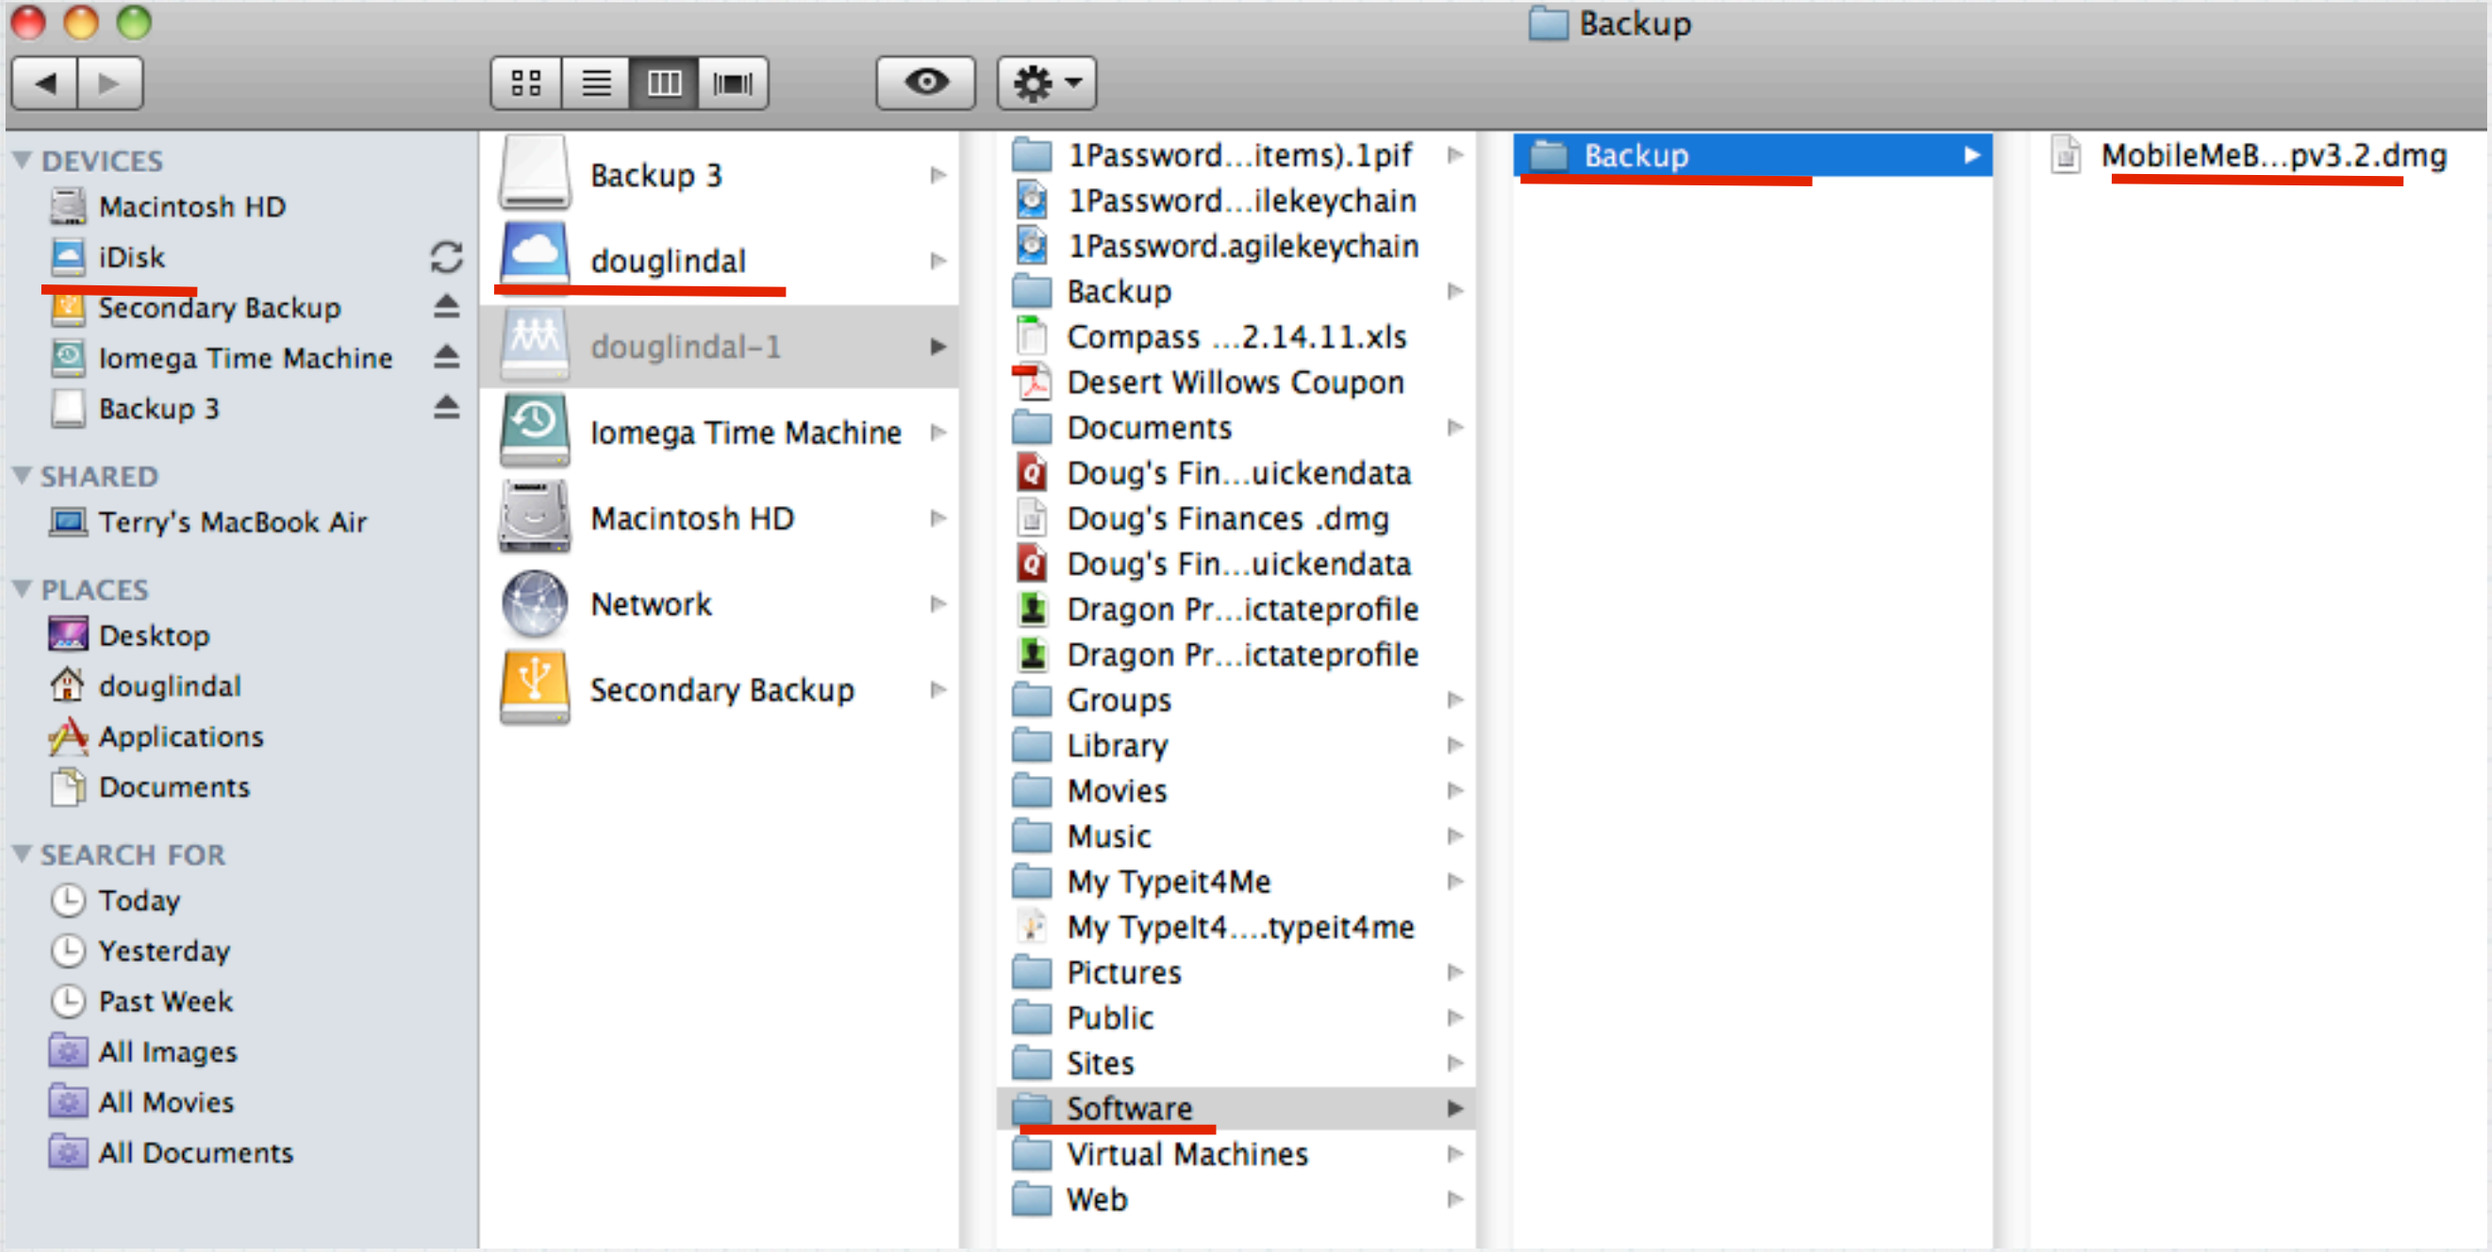
The Finder Window -

Rather than use the "Documents File" on my Hard Drive, I store all my docs on iDisk in MobileMe so I can access them from anywhere



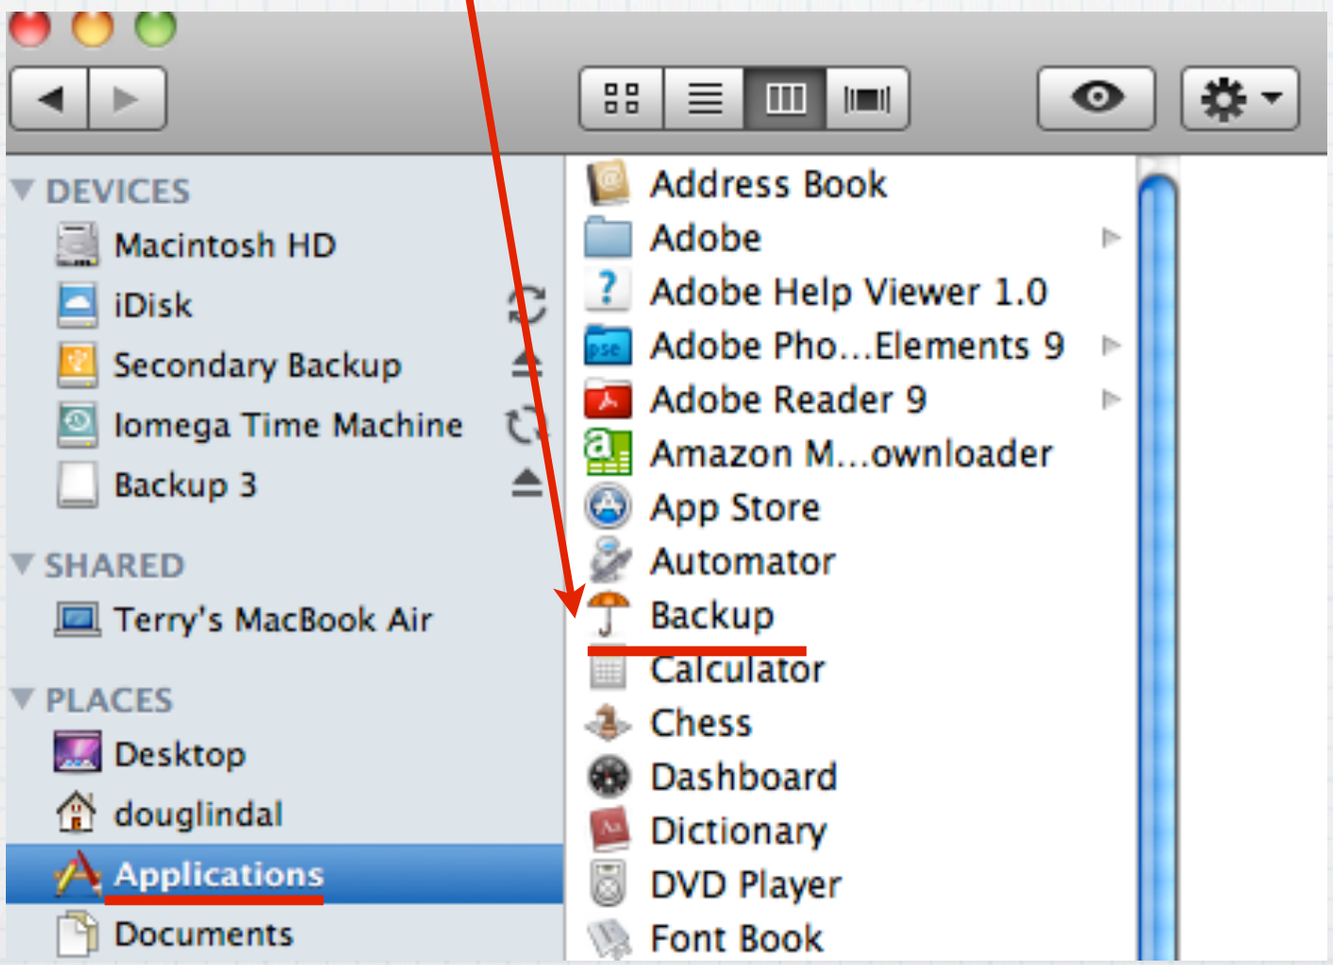
The MobileMe Backup Utility

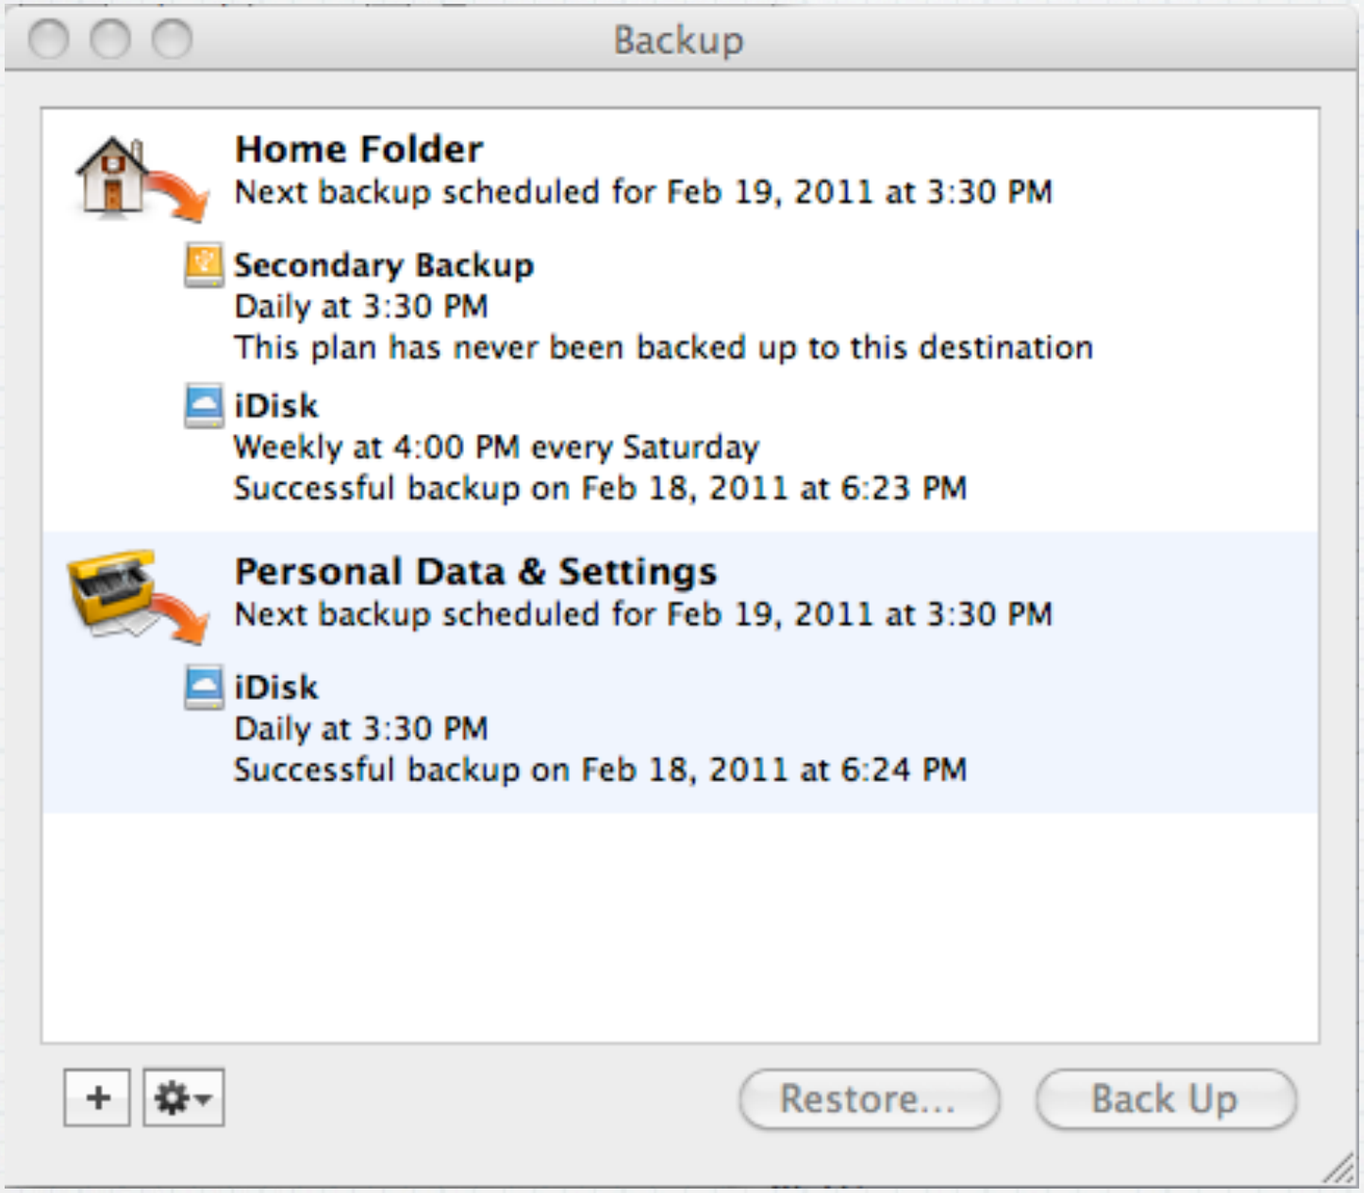
MobileMe Now offers an automated Backup Utility



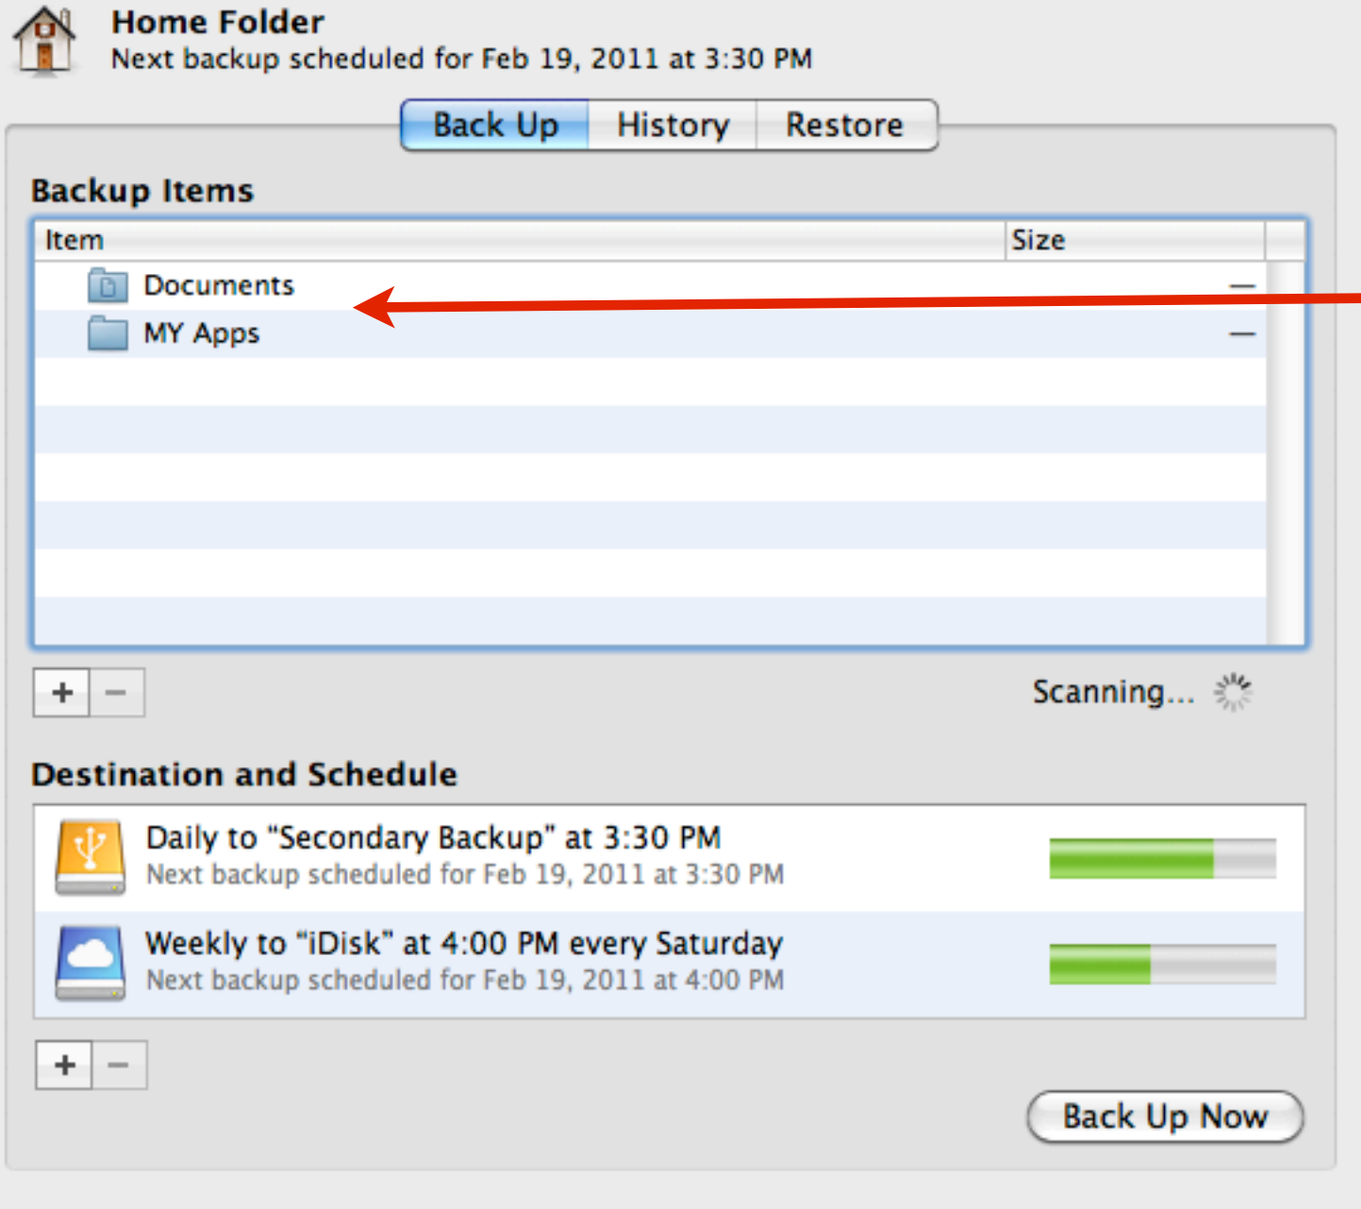
Download the software from iDisk in the Software Folder

Launch Backup from the Dock or the Finder Window



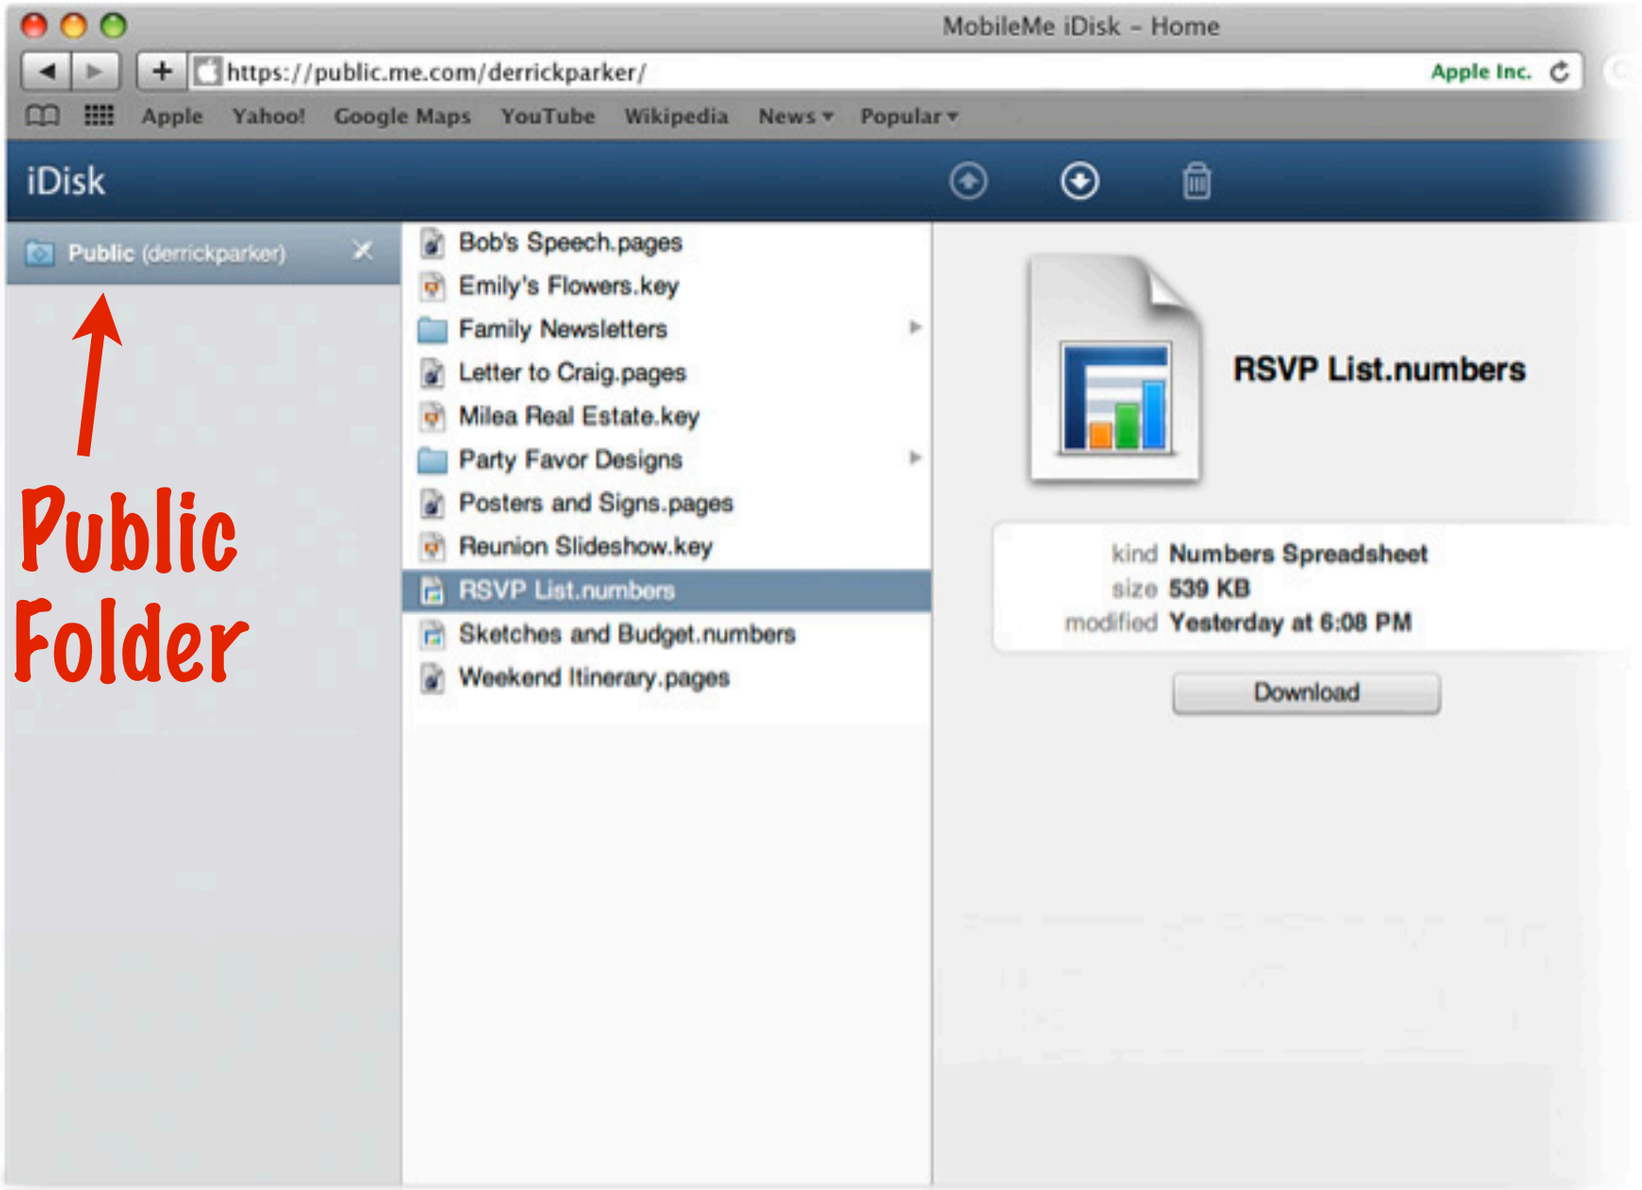


You customize the backup routine - I backup to both iDisk and a separate Hard Drive

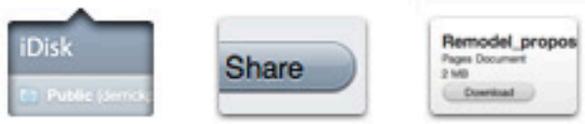


Approx. 5 GB

You can even customize what you backup - I don't have space to backup my 50 Gb of music & photos to my 20 Gb iDisk account!

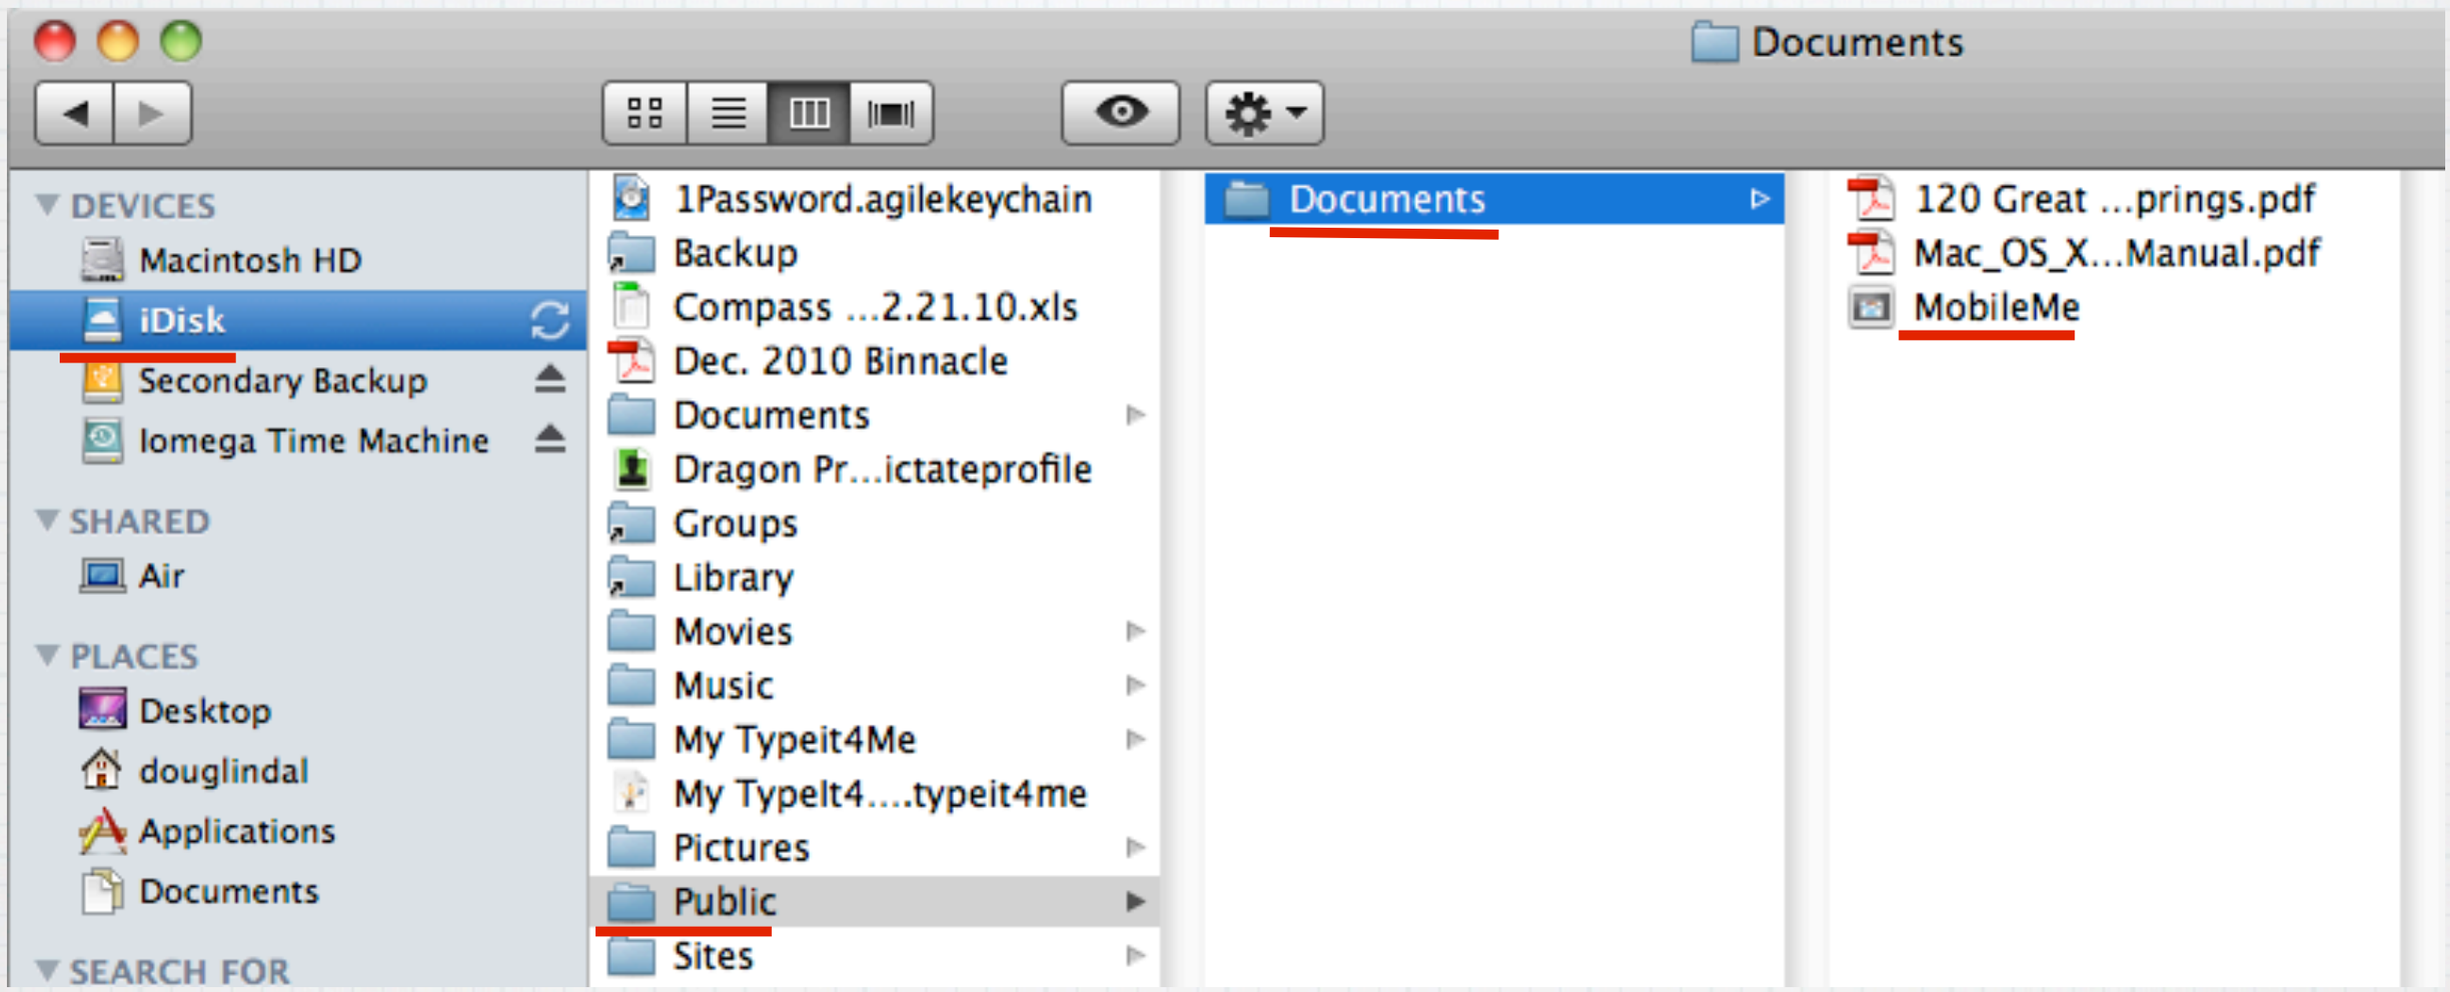


The Public Folder makes working with others easy.

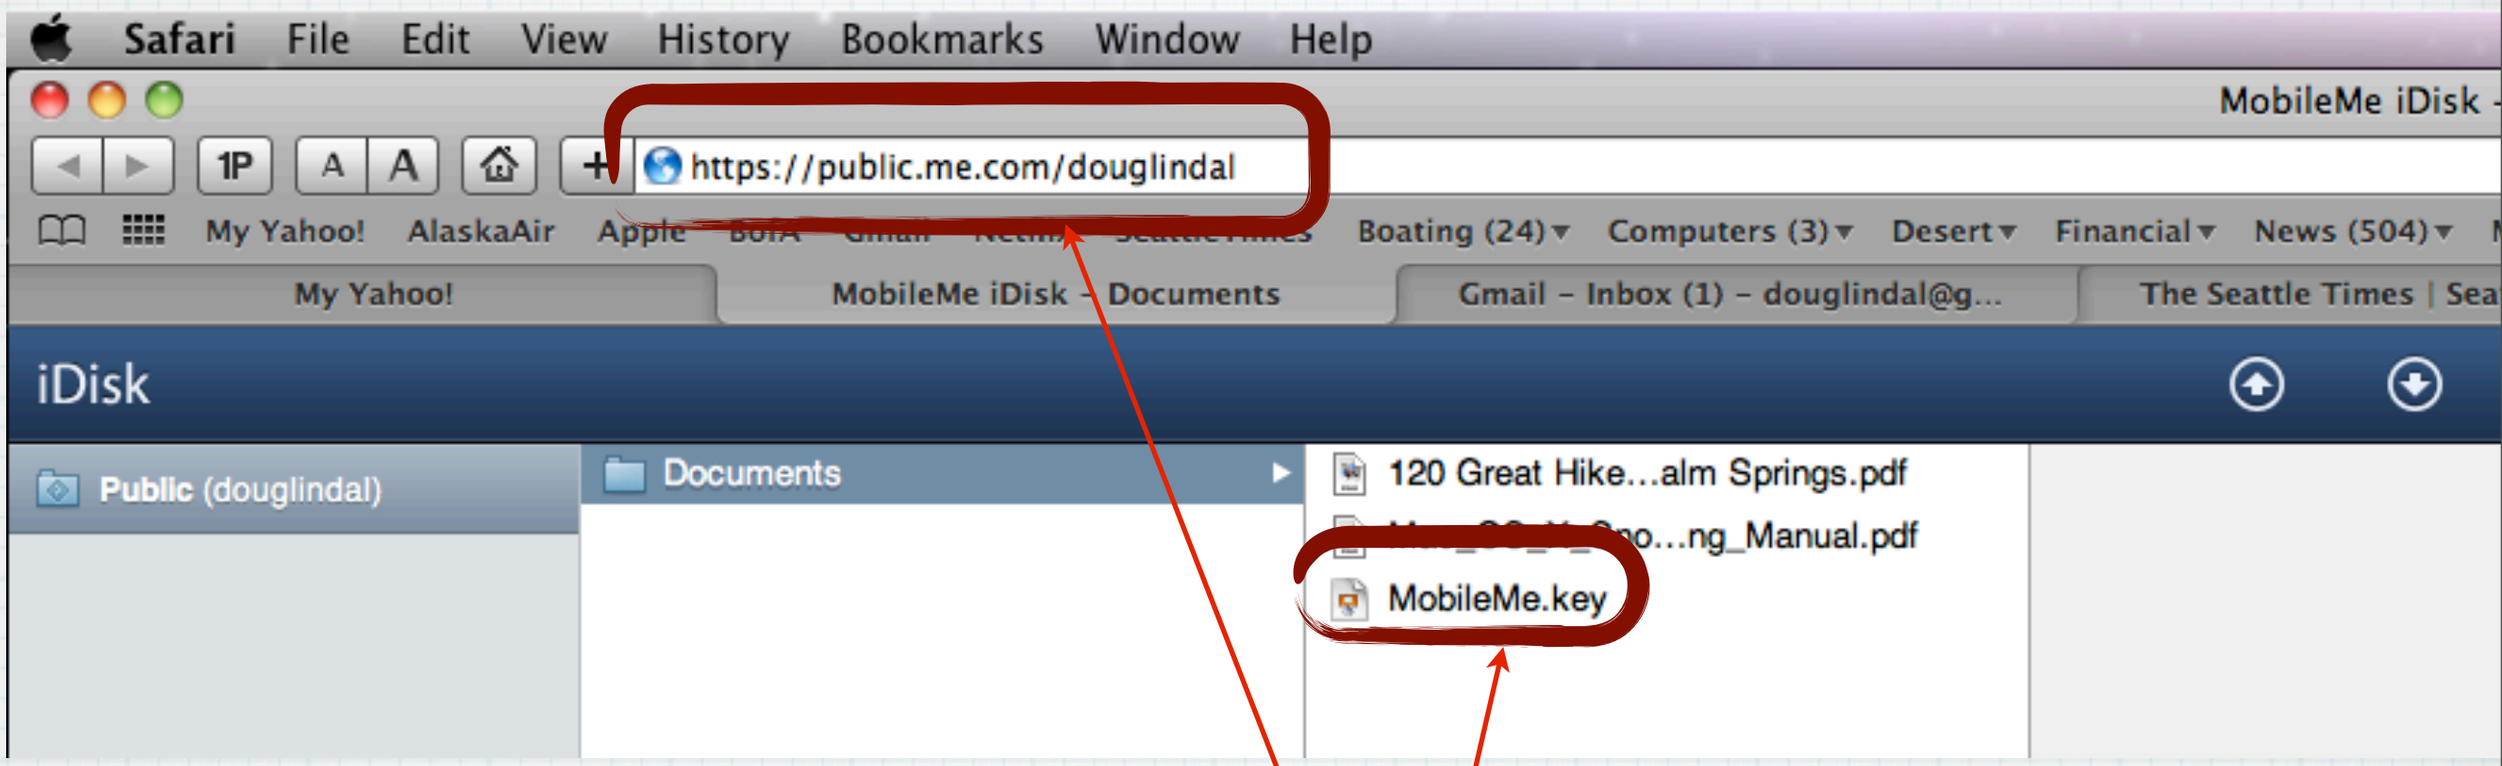


Collaborate online.

iDisk includes a Public folder that makes working with others easy. Just add the files you want to share, and your friends and coworkers can access them using a web browser on a Mac or PC. They can download any file in your Public folder to make changes and post their own files, too.



Using Finder, I uploaded this KeyNote file to my Public folder on iDisk



Download my KeyNote Presentations:

https://public.me.com/douglindal

Share large files.

Sharing files too big to email as attachments is a snap with iDisk. Just upload what you want to share, choose your recipients, and iDisk sends them an email with a link to download the file. You can assign a password to keep your files secure and even set the number of days the download link is available.

Plenty of storage space.

Your MobileMe membership includes 20GB of storage space for all your email, photos, files, and more. Put in perspective, 20GB of space is enough to store nearly 7000 high-quality photos. You can tell MobileMe how much of your 20GB to allocate to Mail and how much to your iDisk. However you split it up, rest assured you'll have plenty of space to store what's important to you.

20 GB of "Cloud" storage is included with MobileMe

Find your iPhone or iPad.

Sometimes it's your keys. Other times it's your glasses. Misplacing things happens all the time. The good news is, if you misplace your iPhone or iPad, Find My iPhone can help you find it.

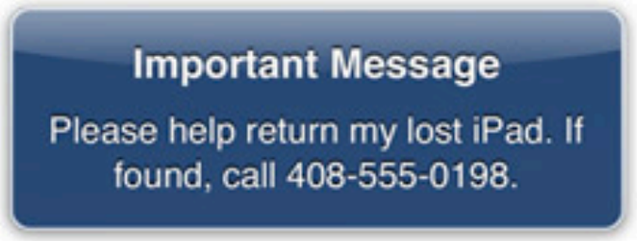
Learn how to get Find My iPhone, Find My iPad, or Find My iPod touch free.

Locate your iPhone or iPad on a map.

If you lose your iPhone or iPad, MobileMe can help you find it with Find My iPhone. Just enable Find My iPhone in the MobileMe settings on your iPhone or iPad.* Then sign in to me.com from any computer or using the Find My iPhone app on another iPhone, iPad, or iPod touch to display its approximate location on a full-screen map.

Find My iPhone (or iPad)

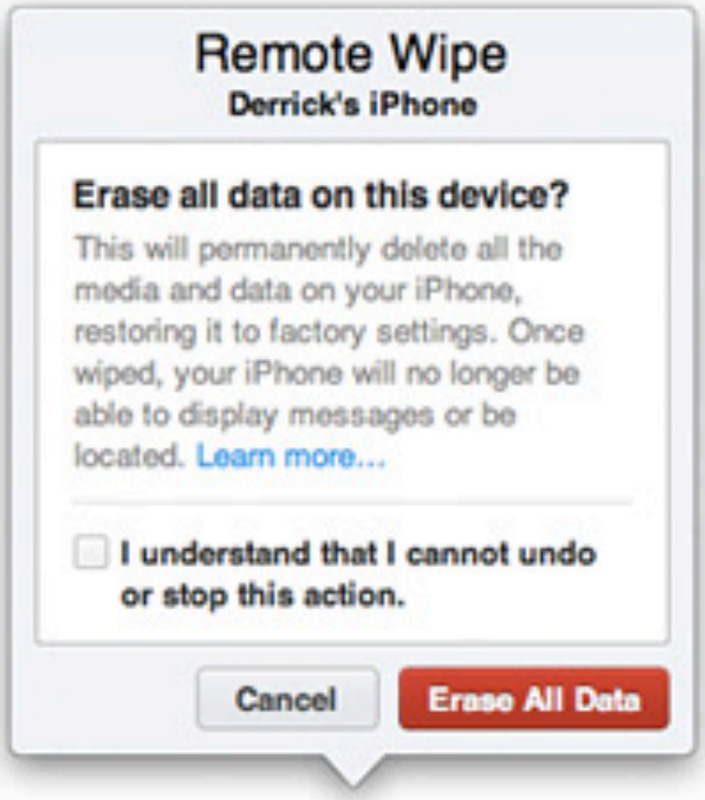
Display a message or play a sound to help you find it.



Say you've just used the Find My iPhone feature, and it turns out you left your iPhone or iPad at the doctor's office. Not to worry. You can write a message that will be displayed on your iPhone or iPad. Something like, "Oops, left my iPhone behind. Please call me at 408-999-9999." Your message appears on the screen, even if it's locked. And if the map shows you that your iPhone or iPad is nearby — say, at home under a pile of laundry — yet you still can't find it, you can tell MobileMe to play a sound that overrides the ringer volume or silent setting on your device.

Set a passcode lock remotely.

Once you realize you haven't simply misplaced your iPhone or iPad at home, you may want to protect its contents until it's safely back in your hands. Sign in to your MobileMe account and remotely set a four-digit passcode lock to prevent people from using your iPhone or iPad, accessing your personal information, or tampering with your settings.



Protect your privacy with Remote Wipe.

Addresses, phone numbers, email, photos. Your iPhone or iPad contains important and personal information — information you probably don't want in the hands of a stranger. So if you lose your iPhone or iPad and displaying a message on it hasn't resulted in its safe return, you can initiate a remote wipe to restore it to the factory settings.* If you eventually find your iPhone or iPad, you can restore your email, contacts, calendars, and bookmarks by enabling your MobileMe account on your device. Or connect your iPhone or iPad to your computer and use iTunes to restore the data from your most recent backup.

Mac OS X Lion Sneak Peek

Mac OS X Lion

The power of Mac OS X. The magic of iPad.

We took our best thinking from Mac OS X and brought it to the iPhone. Then we took our best thinking from the iPhone and brought it to iPad. And now we're bringing it all back to the Mac with our eighth major release of the world's most advanced operating system. Mac OS X Lion arrives in summer 2011. Here's a sneak peek at just a few of its features.

Sneak Preview Time!

The next Mac Operating System?

OS X Lion, due out this summer

Launchpad. A home for your apps.

The Launchpad gives you instant access to your apps — iPad style. Just click the Launchpad icon in your Dock. Your open windows fade away, replaced by an elegant, full-screen display of all the apps on your Mac. It takes just a swipe to see multiple pages of apps, and you can arrange apps any way you like by dragging an app icon to a new location or by grouping apps in folders. Downloaded an app from the App Store? Your new app automatically appears on the Launchpad, ready to blast off.

Mac OS X Lion - LaunchPad Displays like an iPhone or iPad Screen

Launchpad

Group your apps any way you like using folders.

Or organize Apps in Folders to take less screen space

Full-screen apps. A better way to enjoy the apps you love.

On iPad, every app is displayed full screen, with no distractions, and there's one easy way to get back to all your other apps. Mac OS X Lion does the same for your desktop. You can bring an app to full screen with one click, switch to another full-screen app with a swipe of the trackpad, and swipe back to the desktop to access your multi-window apps. And systemwide support for full-screen apps makes them bigger and more immersive. So you can concentrate on every detail of your work, or play on a grander scale than ever before.

Full-Screen Apps - No Distractions!
Just swipe right to left on trackpad

Mission Control. Mac command central.

Mission Control is a powerful and handy new feature that provides you with a comprehensive view of what's running on your Mac. It gives you a bird's-eye view of everything — including Exposé, Spaces, Dashboard, and full-screen apps— all in one place. With a simple swipe gesture, your desktop zooms out to Mission Control. There you can see your open windows grouped by app, thumbnails of your full-screen apps, Dashboard, and even other Spaces, arranged in a unified view. And you can get to anything you see on Mission Control with just one click. Making you the master of all you survey.

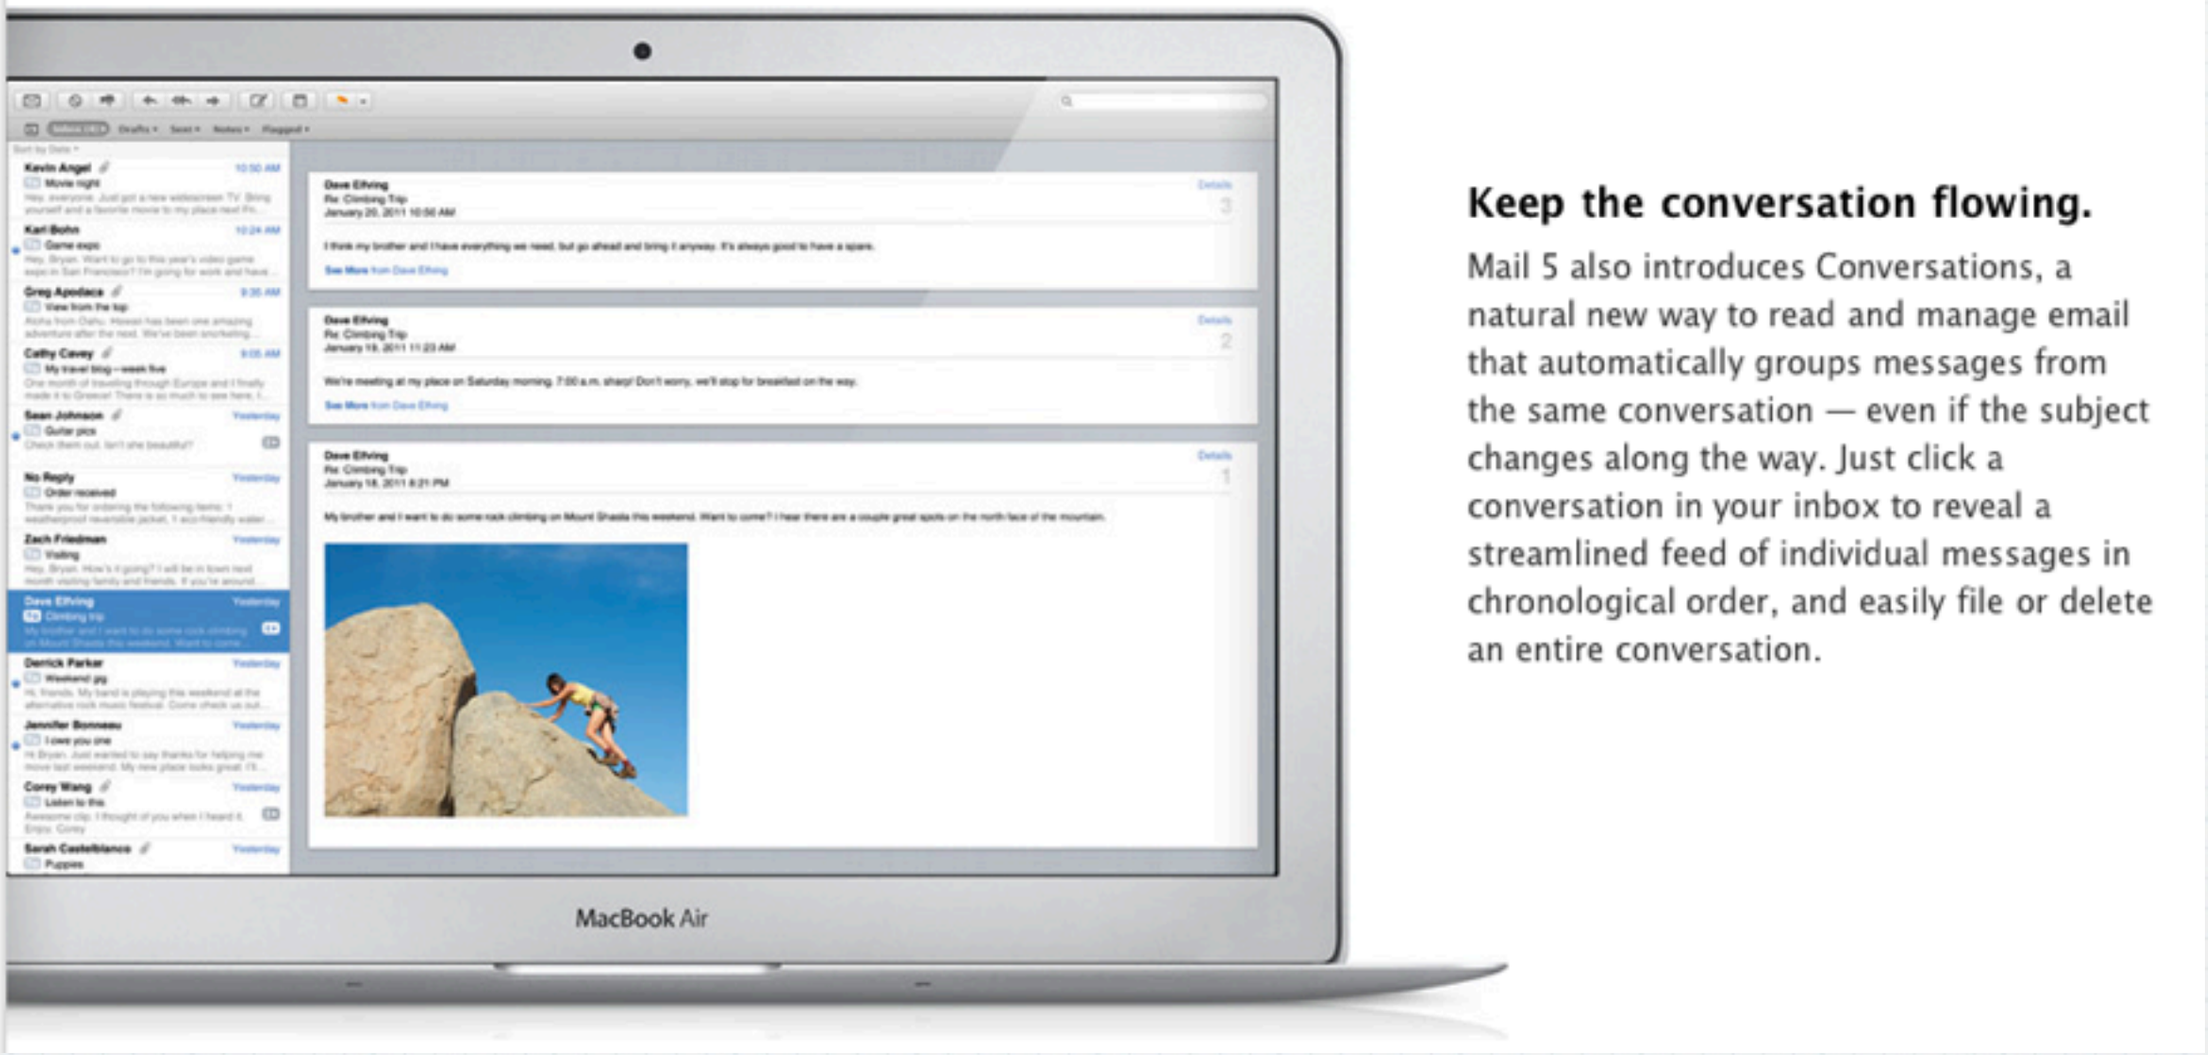
Mission Control, combines Expose, Spaces, Dashboard - all in one place

Mail 5

A whole new way to look at email.

Just like Mail on iPad, Mail 5 in Mac OS X Lion features a new layout that takes advantage of the widescreen display on your Mac. You see the messages in your inbox as well as a full-height preview of the selected message. The new Mailbox bar gives you one-click access to your favorite folders. Mail 5 also includes a powerful new way to search that makes finding what you're looking for quick and easy, even in the largest of inboxes.

Mac OS X Lion - A new version of Mail like on the iPad



Keep the conversation flowing.

Mail 5 also introduces Conversations, a natural new way to read and manage email that automatically groups messages from the same conversation — even if the subject changes along the way. Just click a conversation in your inbox to reveal a streamlined feed of individual messages in chronological order, and easily file or delete an entire conversation.

The new Mail program groups emails together in Threads or Conversations

All-new FileVault

A new level of security.

Keep all the data on your Mac even more secure with XTS-AES 128 data encryption at the disk level. Initial encryption is fast and unobtrusive — it encrypts everything in the background while you work. FileVault also encrypts for your external drives, and provides the ability to wipe all the data from your Mac instantaneously.

Mac OS X Lion - a higher level of encryption security for your data

AirDrop

Send it by air.

With AirDrop in Mac OS X Lion, you can send files to anyone around you — wirelessly. AirDrop doesn't require setup or special settings. Just click the AirDrop icon in the Finder sidebar, and your Mac automatically discovers other people nearby who are using AirDrop. You'll even see contact photos for those who are already in your Address Book. To share a file, simply drag it to someone's name. Once accepted, the file transfers directly to the person's Downloads folder. When you're done with AirDrop, close the Finder and your Mac is no longer visible to others.

AirDrop, smoothly sends your files or photos to others, wirelessly - but you don't need a wireless network

Resume

Pick up exactly where you left off.

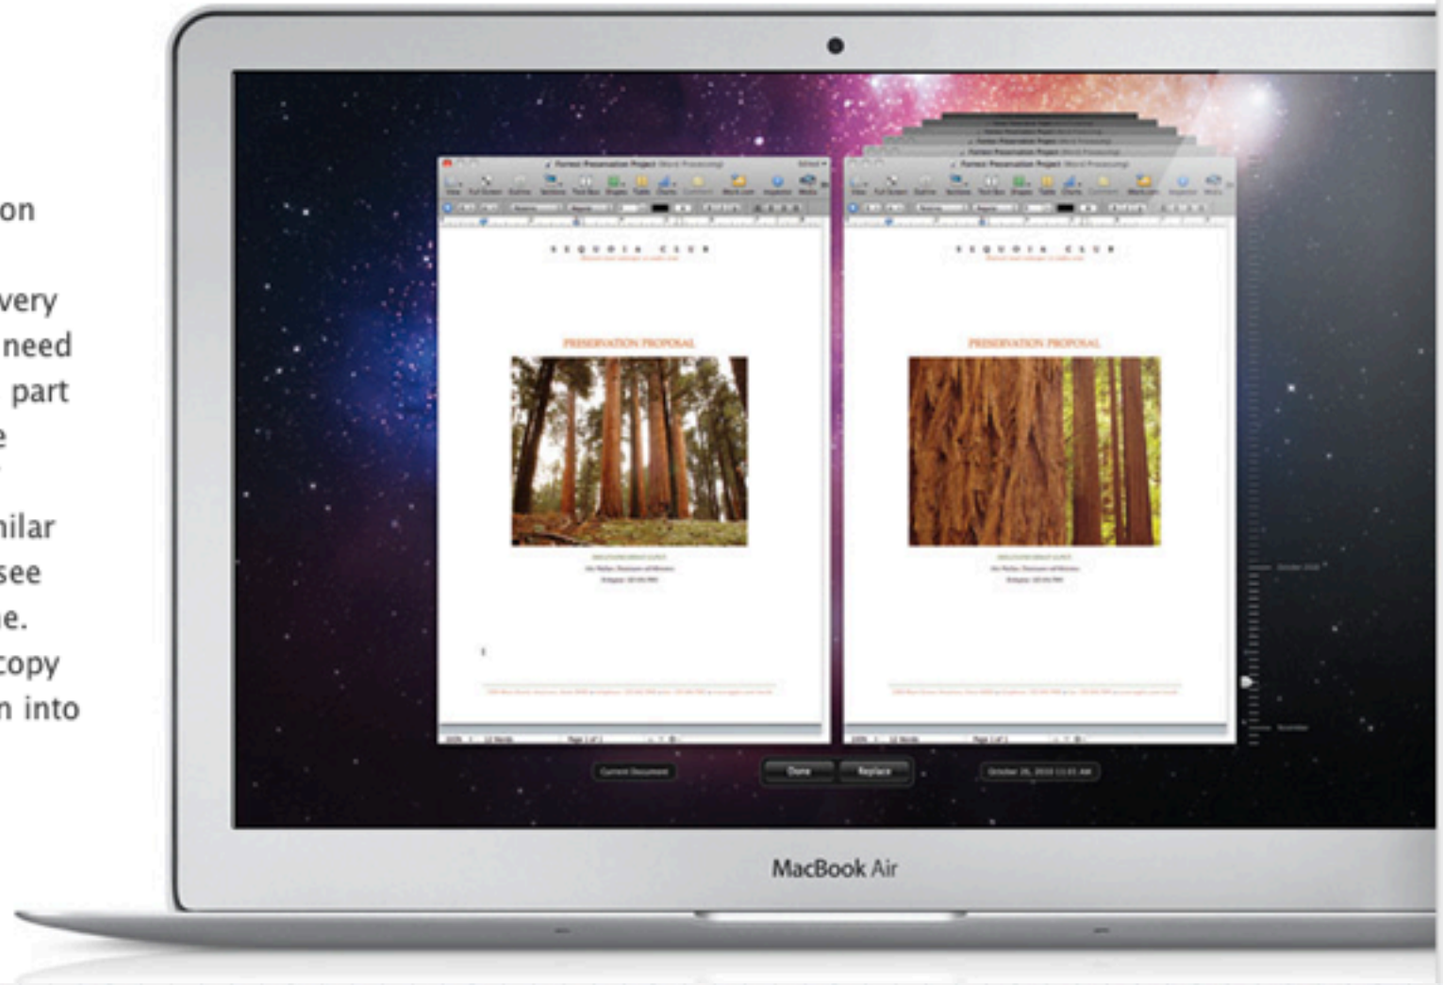
If you've ever restarted your Mac, you know what's involved. First you save your work, then close all your apps, then spend valuable time setting everything up again. With Resume, that time-consuming process is a thing of the past. Resume lets you restart your Mac — after a software update, for example — and return to what you were doing. With all your apps back in the exact places you left them. In fact, whenever you quit and relaunch an app, Resume opens it precisely the way you left it. So you never have to start from scratch again.*

Resume saves your work at shutdown and restarts at same place

Versions

See every step you take.

Versions records the evolution of a document as you create it. Mac OS X Lion automatically creates a version of the document each time you open it and every hour while you're working on it. If you need to revert to an older version or retrieve part of a document, Versions shows you the current document next to a cascade of previous versions — in an interface similar to that of Time Machine — so you can see how your work looked at any given time. You can revert with a click, or quickly copy and paste work from a previous version into the current version.*



Versions saves each change to your work so you can revert back easily, like Time Machine

Auto Save

Past perfect.

Say good-bye to manual saving. Auto Save in Mac OS X Lion automatically saves your work — while you work — so you don't have to. Lion saves changes in the working document instead of creating additional copies, making the best use of available disk space. The lock feature prevents inadvertent changes from being saved and automatically locks documents after two weeks. And the revert feature returns you to the state the document was in when you last opened it, so you can feel free to experiment with confidence.*

Mac OS X Lion - AutoSave works automatically so you don't have to!

Gestures and animations

More handy ways to interact with your Mac.

Multi-Touch gestures make everything you do on iPad easy and intuitive. Now a richer Multi-Touch experience comes to the Mac. Enjoy more fluid and realistic gesture responses, including rubber-band scrolling, page and image zoom, and full-screen swiping. In Mac OS X Lion, every swipe, pinch, and scroll looks and feels more responsive and lifelike.

Get animated.
Mac OS X Lion introduces smoother, more lifelike responses to gestures.

See animation in action

Gestures - go to:

http://www.apple.com/macosx/lion/?sr=hotnews.rss

to see how it works.

The Mac App Store. Now open.

Introducing the best place to discover and buy new apps made just for Mac, right on a Mac. Just like shopping the App Store on iPad, the Mac App Store offers endless possibilities to browse and purchase apps. And it simplifies the way you install apps on the Mac. Just click once, and your new app is downloaded, installed, and ready to go. Learn more about the Mac App Store ▸

The New Mac App Store - Now Open

The Mac App Store. More than a thousand apps. One simple new way to get them.

With the Mac App Store, getting the apps you want on your Mac has never been easier. No more boxes, no more disks, no more time-consuming installation. Click once to download and install any app on your Mac. The Mac App Store is now available as a software update for any Mac running Mac OS X Snow Leopard.

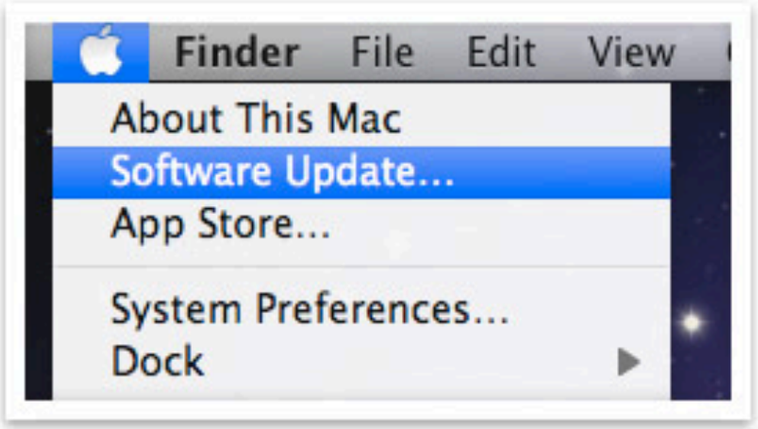
Get the Mac App Store.
See how ▸

The new Mac App Store - Download at:

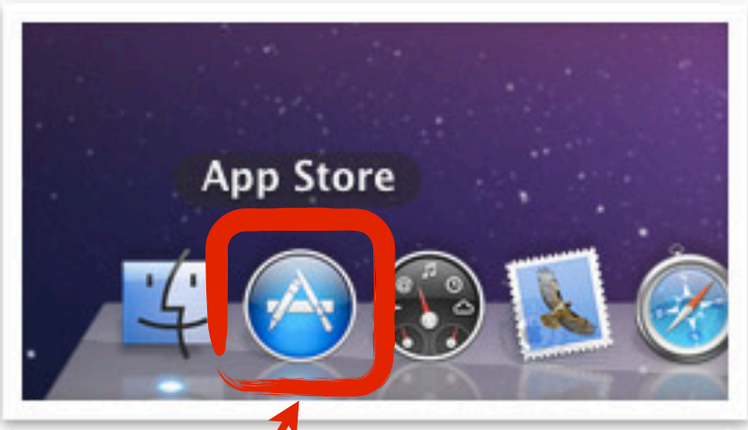
www.apple.com/mac/app-store/

How to get the Mac App Store:

The Mac App Store is available as a free software update for Mac computers running Mac OS X v10.6 or later. If you have an earlier version of Mac OS X, you will need to upgrade to Mac OS X Snow Leopard.



1. Update your software.
Click the Apple icon, then choose Software Update. A dialog will appear on your desktop. Click the Install button in the dialog to begin the installation. You will be instructed to restart your Mac to complete the process.



2. Open the Mac App Store from the icon in your Dock.
After you restart your Mac, the Mac App Store icon will appear in your Dock. Simply click the icon to launch the Mac App Store, then enter your Apple ID.

Update your Snow Leopard Operating System to Ver. 10.6.6 and the new App Store Icon will appear on Dock

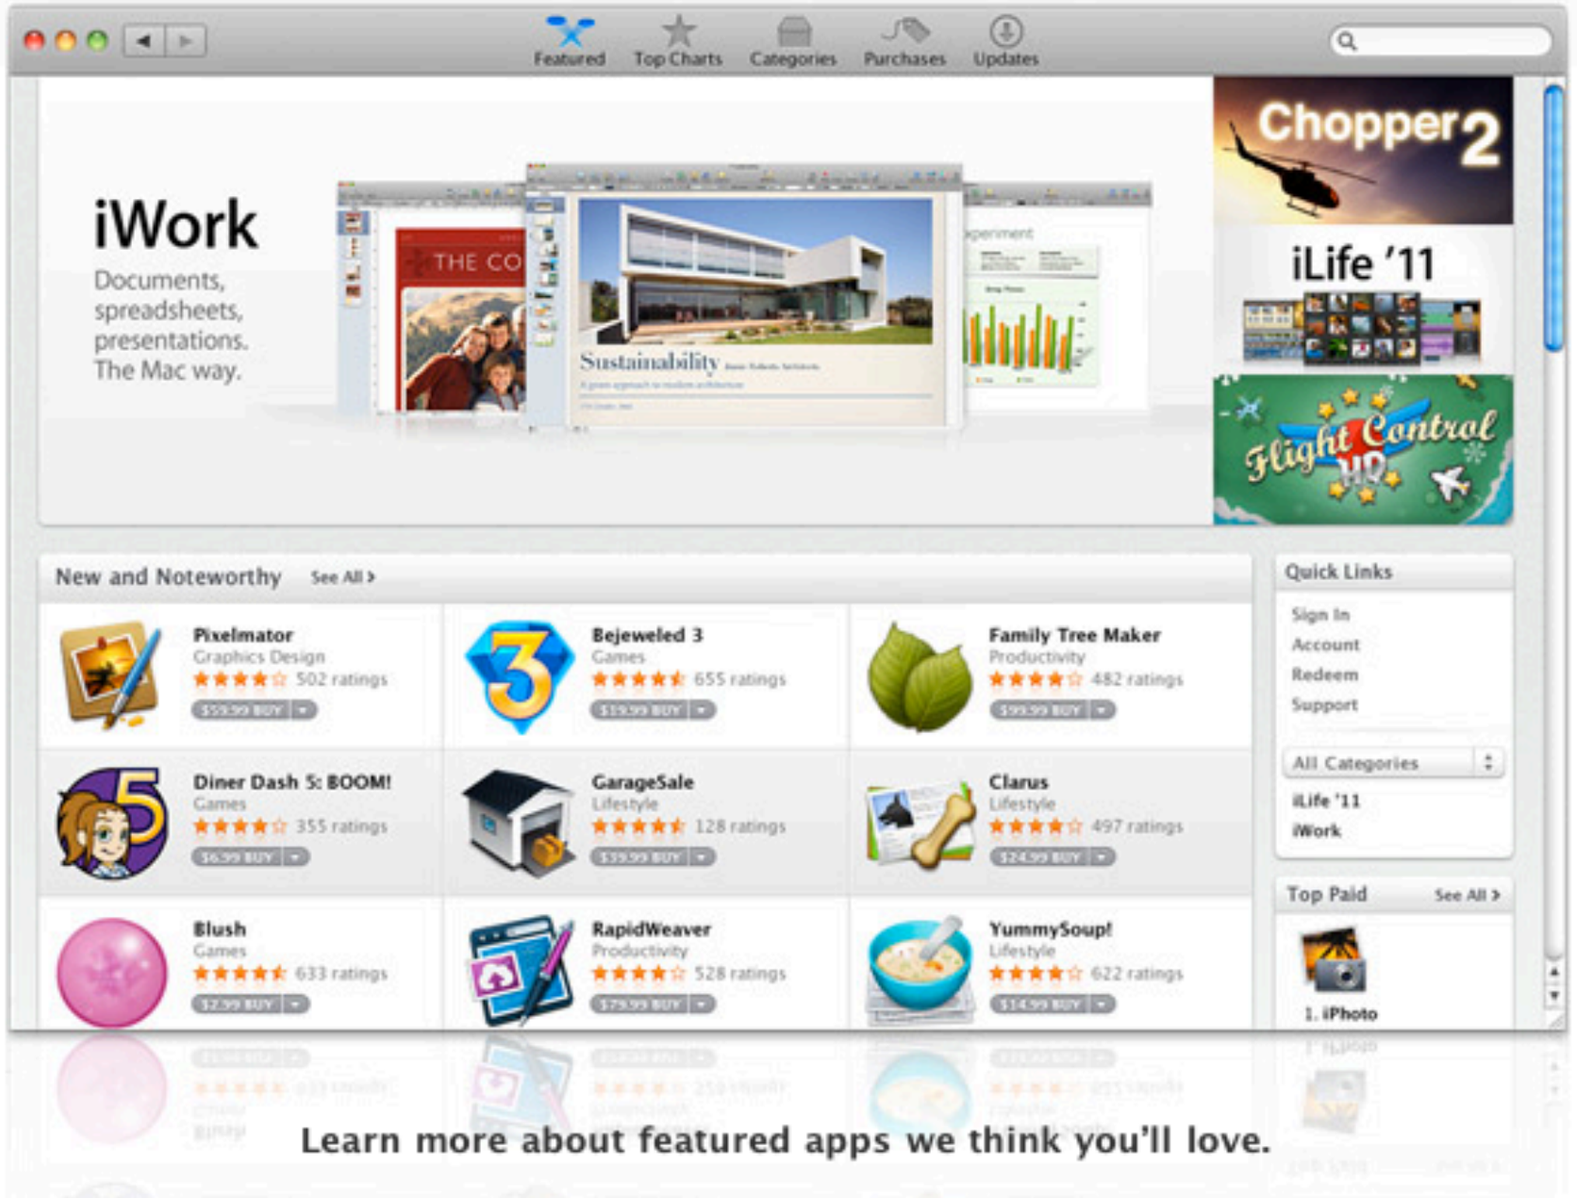
The New App Store on your Mac

Great apps for your Mac. Right on your Mac.

The Mac App Store is just like the App Store for iPhone, iPod touch, and iPad. So it's as easy to find and download Mac apps as it is to add your favorite magazine to iPad or a new game to iPod touch. You can browse Mac apps by category, such as games, productivity, music, and more. Or do a quick search for something specific. Read developer descriptions and user reviews. Flip through screenshots. When you find an app you like, click to buy it.



Very similar to the App Store in iTunes - purchase software through Apple with complete confidence
