

Screenshots & Markup in iOS 11

Screenshots: What's the same? How to activate: Press the **Home** and the **Power** buttons together. Plink.

What's new? A preview of that **Screenshot** instantly appears in the lower left hand corner. Tap on that tiny **thumbnail image** and it will open up to the **Instant Markup** tools. You will have about 5 seconds before it disappears if you ignore it. It is auto-saved to your **Screenshots** and **Camera Roll** albums to edit later. To delete this **Screenshot**, you immediately need to tap '**Done**' in upper Left hand corner then select either '**Save to Photos**' OR '**Delete Screenshot**'.

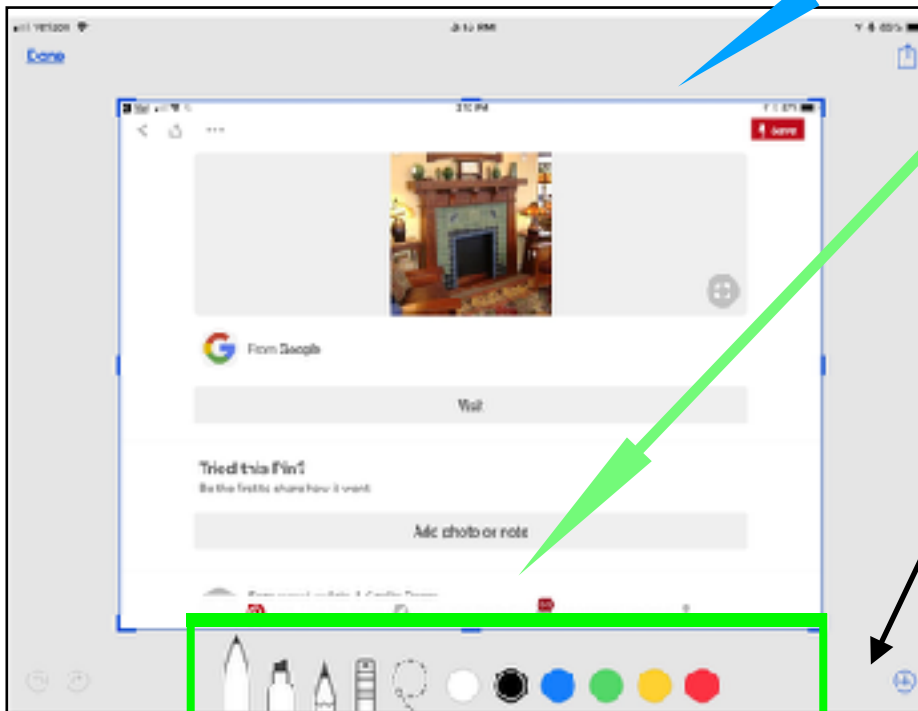

What you see when you click on that **thumbnail**. Now you have lots of tools! OR you can mail it as is.

Use a finger to adjust the **blue** outline to **crop** your image.

Choose a **pen/highlighter/pencil** AND a color then **draw** with a finger (or Apple Pencil (on iPad Pro) to edit your screenshot.

Additionally, other tools available in your **Instant Markup** toolkit are an eraser, drop shadow tool, undo/redo.

Tap the "+" to access a text entry field, a signature tool, a magnifier tool plus other various shapes.

When you are done editing your **Screenshot**, you can **save** it to the **Photos** app, **Files** app and more **OR** delete it by tapping the "**Done**" button. To **share** it simply use the **Share** Icon. You can share in **iMessage**, email or social network.

Screenshots & Markup in iOS 11

Sharing without Editing: If you quickly just want to share or transfer a **Screenshot** you can. Tap on your **Screenshot** and immediately hit the **'SHARE'** button. This will bring up all the typical options - **Airdrop** to your own computer people nearby. Also included are all these options

Crop & Zoom: *It is my position that* Cropping is the first thing you want to do. Just move the the **Blue Border** around the **Screenshot** to your desired outcome. You can undo it before you save if you have moved the borders too much. *Nothing is Permanent.*

You also have pinch options — Pinch out gesture for a **Zoom In** OR Pinch In for a **Zoom Out**. Very much like other zooming options on the **iPhone** or **Photos**.

Editing: Select your **Draw** Tools: *Pen (default), Highlighter, Pencil.* AFTER you select your tool of choice — then you want to tap on the color dot. Black is default.

In **iOS 11** you no longer have options as to sizes. Now **GESTURES** dictate. Move slowly and precisely with your finger and you will get thin lines. Get wild and crazy and you'll get thick lines. This takes practice!!! Of course, an **eraser** is also provided should you make a mistake.

Dotted Lasso Tool can be used to more things around. You will need to tap and move a specific doodle to where you now want it on the screen.

Undo & Redo: There is a **back arrow** in the top right to undo your last edit. You can actually go back as far as you need. Conversely, the **forward arrow** will redo any of these past actions. **Press** and **Hold** bring up more undo/redo options.

Screenshots & Markup in iOS 11

“+” sign options:
Text, Signature, Magnifier and shapes.

Text: **TAP** the “Aa” icon, **TAP** on the text box, then “**edit**” and now you can start typing. You have the choice of different colors, different fonts, making your text smaller or larger and/or change the text’s **justification** (you can use Helvetica & Georgia) or make it **monospaced**. (A font that is ‘**fixed-pitched**’ — **fixed-width** — or **non-proportional**. The letters and characters each occupy the same amount of horizontal space.) Courier, Lucida & Monaco are examples.

Signature: You can create a **signature** here OR use one previously made. You can also create any random word or phrase that you might use often. If you have not created a **signature** you will be prompted to do so. Only black color works here.

Magnifier: Handy tool. Just select ‘**Magnifier**’ then drag that magnified circle where you need it. Use the **blue dot** to change the size of the circle. Use the **green dot** to change the magnification. You can **Tap** outside the circle to exit.

Customized Shapes: Here you will find *Squares, circles, speech bubbles and arrows*. Each of these can be customized. The shapes can be made bigger or smaller. The outlines thinner or thicker or fill with a solid color as well, reduce or stretch them. You have the option of choosing different types of lines for the arrow.

Last but not Least: You can turn on **DND** so as **Not To Disturb** your creativity. Also - **IF** your **Screenshot** screen turns off — ALL of your edits will be saved to the **Screenshots** album in **Photos**. However, you will not be able to re-edit any or undo any of your edits!
Be Careful.
