

# Welcome to RMUG

Please sign in  
and add your email address  
only if it has changed or  
if you have not been getting  
my email blasts.

**Siri is Apple's "Personal Voice Assistant" featuring artificial intelligence on your iPhone or iPad.**

**Activate Siri by pressing and holding the big round Home Button.**

**Your wish is its command.**

**Siri lets you ask questions and then answers them, schedules meetings, places phone calls and much much more!**

**Siri understands what you say, knows what you mean & even talks back to you!**

Siri understands what you say  
and it knows what you mean.

Talk to Siri like you would to a person.  
Say something like "Tell my wife I am  
running late" and she will get a text.

Ask "any good burger joints around here?"  
and Siri will reply 'I found a number of  
burger restaurants near you'.

Ask about movies playing nearby and the results look good on a iPhone and GREAT on an iPad's big screen.

What can you ask Siri?

Just about anything .....

It plays the songs you

want to hear,

gives you directions,

even tells you the score

of last night's game.

All you have to do is ask.

### Know the score.

Ask Siri for baseball, basketball, football, hockey, and soccer scores as well as schedules, rosters, and stats.

### Choose a movie.

Ask Siri to get showtimes, buy tickets from Fandango, look up movie facts, play trailers, show you reviews, and more.

### Find a restaurant.

Ask Siri to search by different criteria or a combination. Siri gets you photos, reviews, and reservations.

### **Set reminders.**

Tell Siri what you need to do. Even say when and where you need reminding.

### **Send a text.**

Say who it's for and how the message should read, and Siri writes and sends your text.

### **Check the weather.**

Siri gives you the forecast for where you are or for anywhere you're curious about.

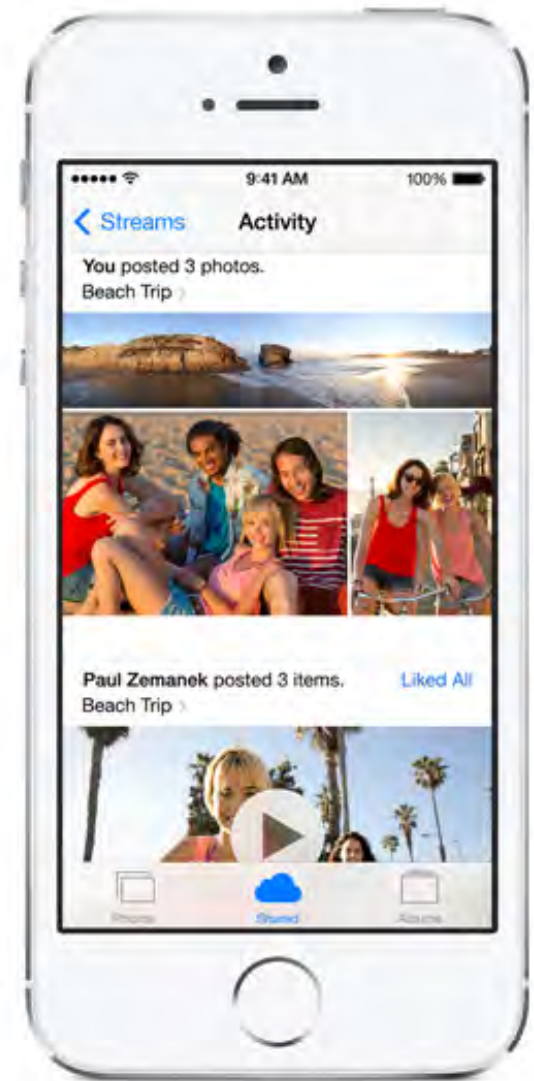

### **Post to Facebook.**

Ask Siri to update your Facebook status and post a comment.

### **Send a tweet.**

Twitter integration means you can ask Siri to tweet for you.

### **Launch an app.**

With iOS 7, you can ask Siri to open apps. Just say something like "Play Angry Birds" or "Open iPhoto."

### **Find information.**

Ask Siri almost anything and it finds the answer using sources like Yelp and WolframAlpha.

### **Schedule meetings.**

Say who, what, where, and when. Siri puts it on your calendar and sends an invitation.

### **Send an email.**

Ask Siri to write and send email. It can even send an email to more than one person.

### **Find a contact.**

Say a name, and Siri finds the address, phone number, and other details from your contacts.

### **Set an alarm.**

Tell Siri to set an alarm for a particular time. You can ask it to set as many as you need.

### **Get directions.**

Ask something like "Where's Apple?" and Siri tells you the address and how to get there.

### Track your stocks.

Just say the company name and Siri keeps you up to date with stock details.

### Set the timer.

Tell Siri how much time you need, and it alerts you when time's up.

### Ask Siri about Siri.

Ask "what can you do?" And Siri tells you exactly that.

One of my favorite  
new uses for Siri in  
iOS 7:

“Which planes are  
flying overhead?”

Instantly combines  
airline databases  
with GPS positioning  
-simply amazing!

12:41 PM

“Which planes are flying overhead”  
tap to edit

OK. I found this:

Input interpretation  
flights seen from current location

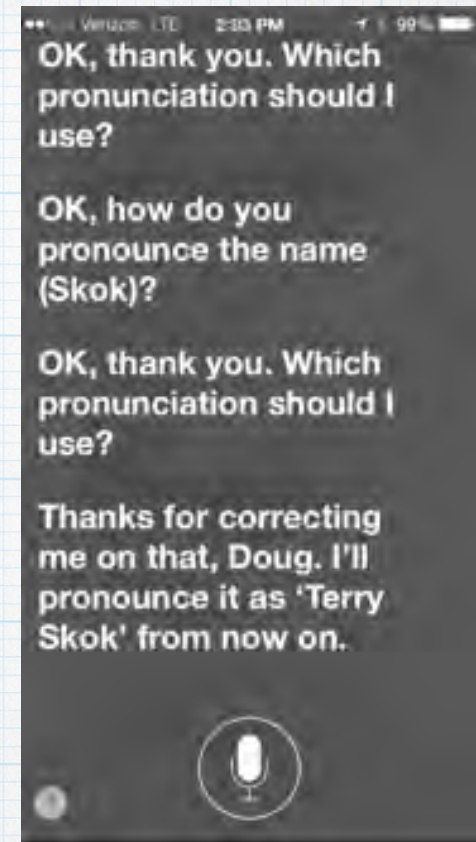

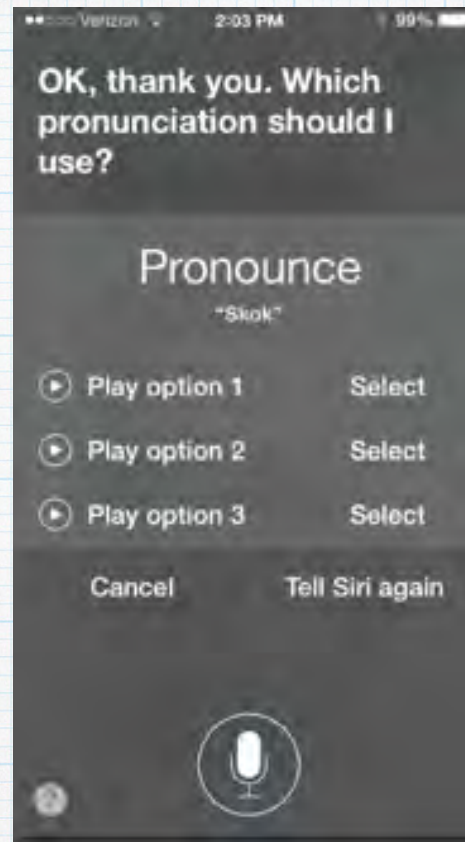

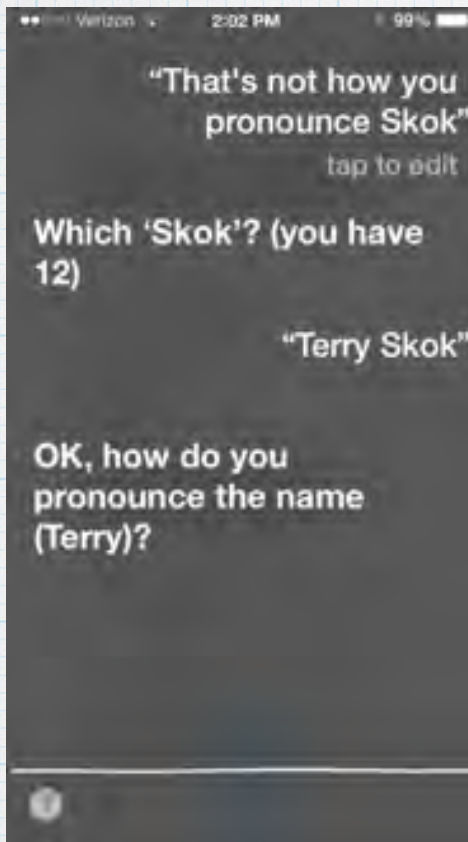

Result

	altitude	angle
N627MW	16 500 feet	20° up
SkyWest Airlines flight 129	26 200 feet	12° up
American Airlines flight 1554	25 500 feet	11° up
Southwest Airlines flight 1425	37 000 feet	8° up
Virgin America flight 878	31 200 feet	7.5° up

	type	slant distance
N627MW	Cessna Citation CJ1	9 miles S
SkyWest Airlines flight 129	Canadair Regional Jet CRJ-700	24 miles WSW
American Airlines flight 1554	Boeing 737-800	24 miles WNW
Southwest Airlines flight 1425	Boeing 737-700	48 miles NNW
Virgin America flight 878	Airbus A320	43 miles ENE

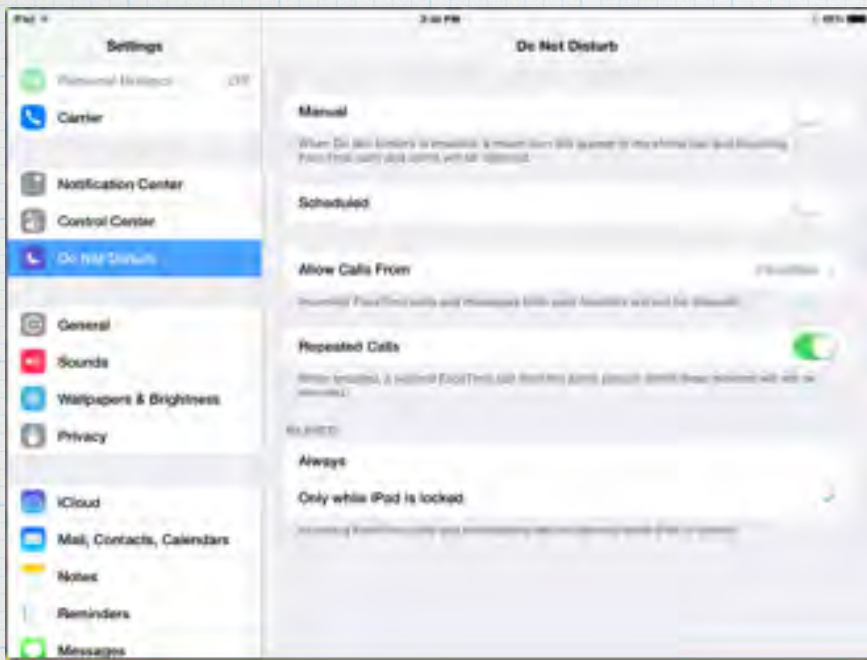

**Siri now even allows you to correct pronunciations - you train it by repeating words.**

Ask Siri to "play Celine" and it figures out I have a iTunes Radio Station called 'Enya & Celine' and cues up a random Celine Dion tune ...

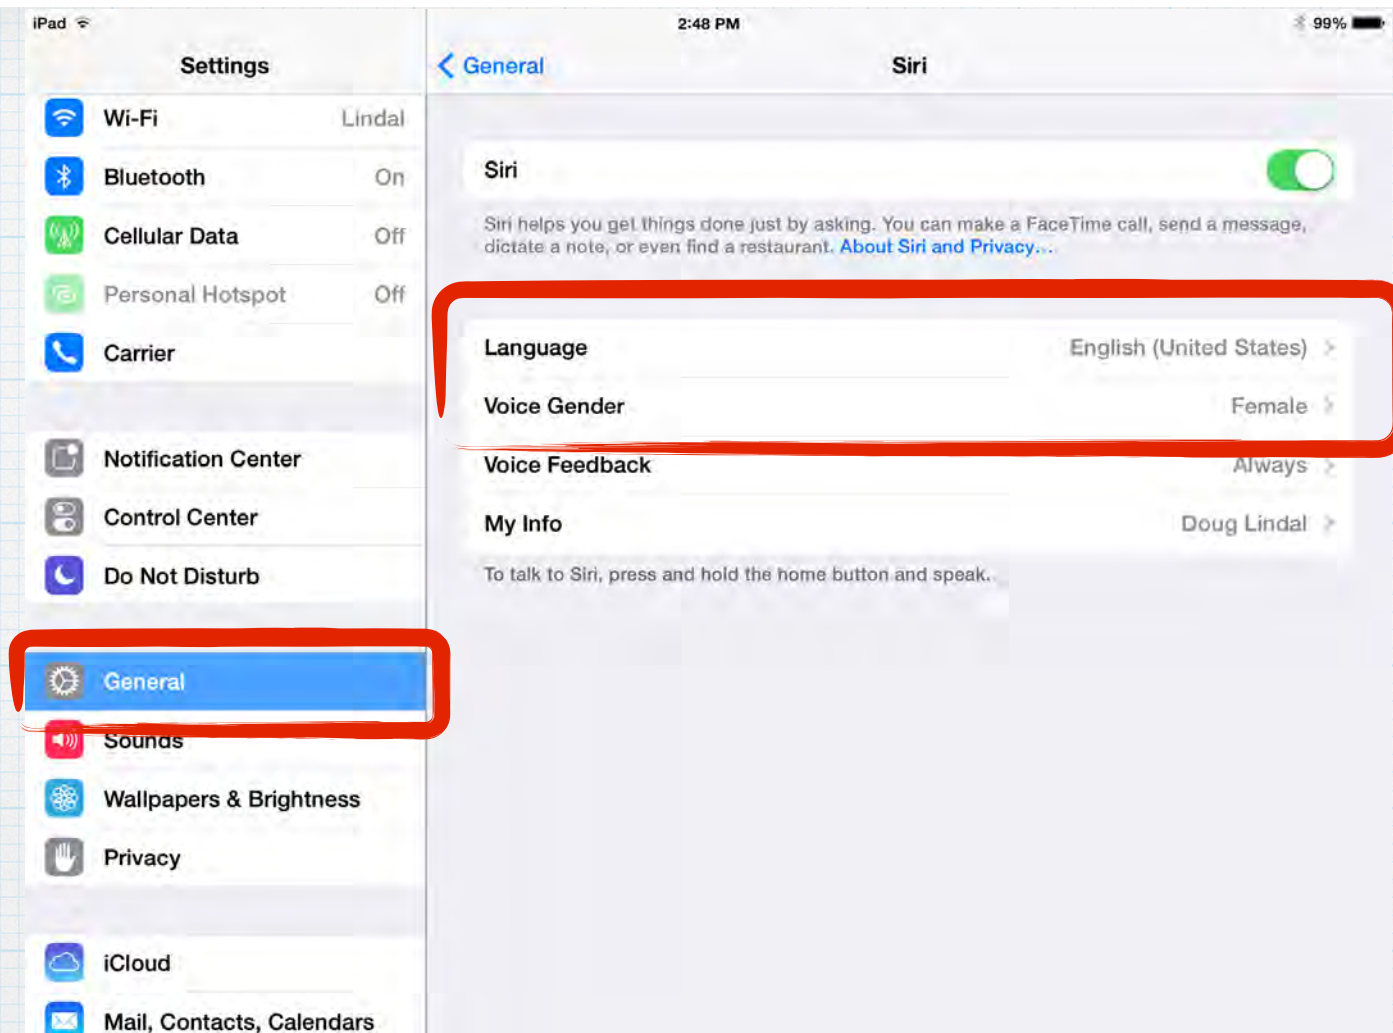

Control your Settings without having to search down through the menus -

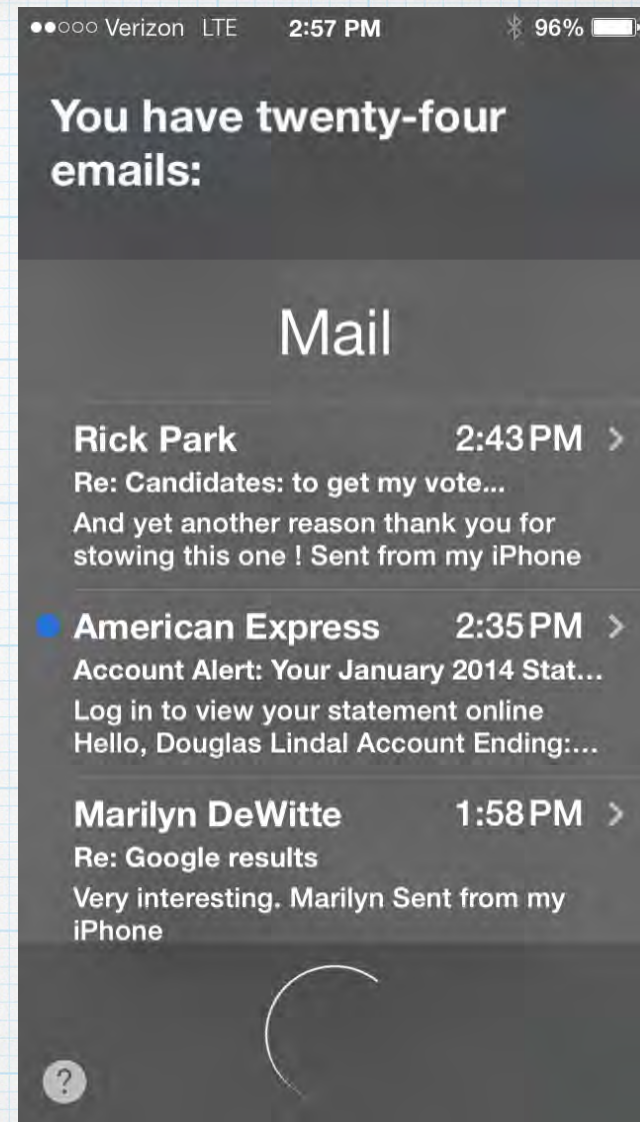

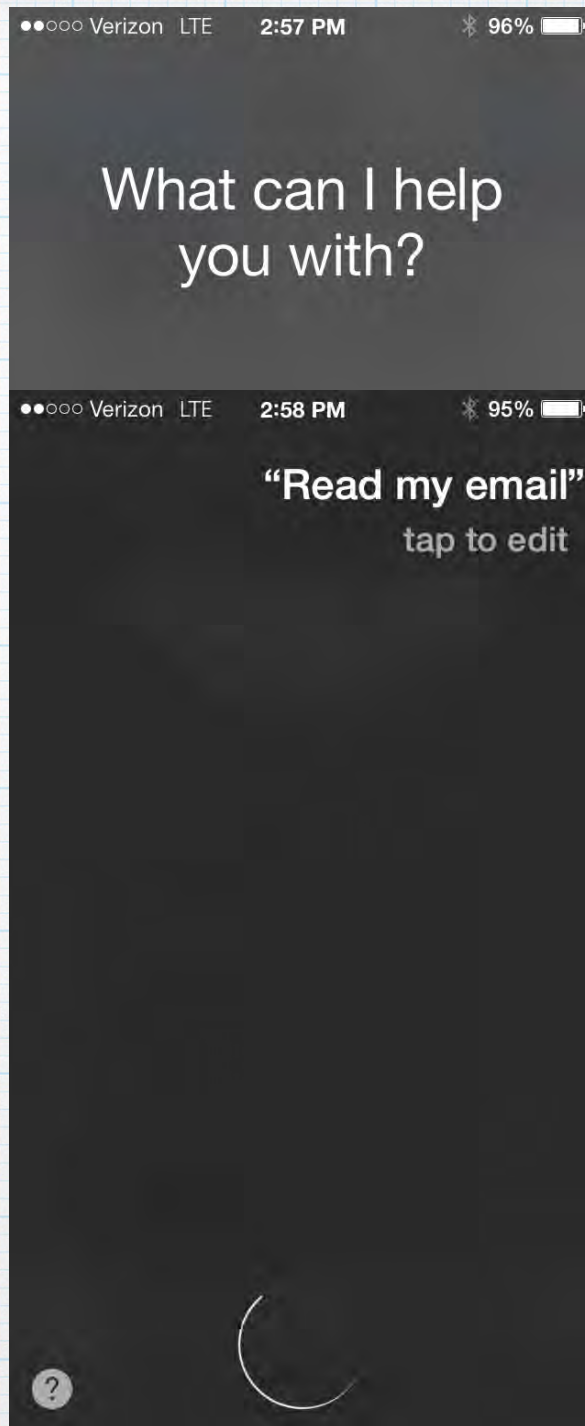

Open Settings, turn off Bluetooth, or dim the screen with your voice.

Tired of the female voice?  
Change it to male - or make Siri  
have a British accent!

Driving and  
want to check  
your texts or  
emails?  
Just ask Siri.  
Please listen  
only - keep  
your eyes on  
the road!

What else can you  
ask Siri?

Just ask Siri for  
suggestions!

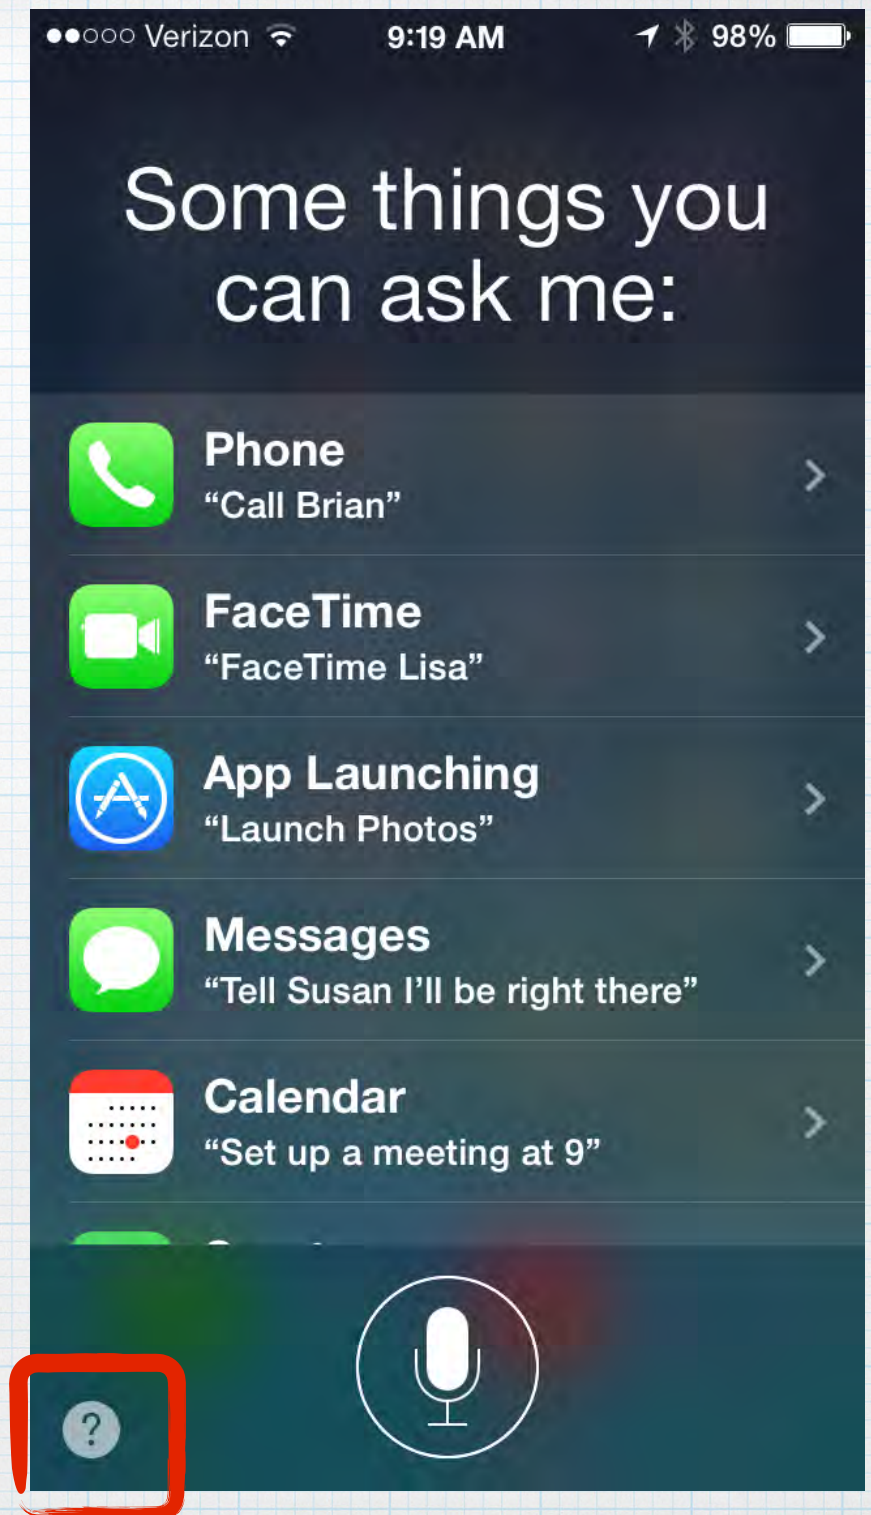

Press the Home  
Button

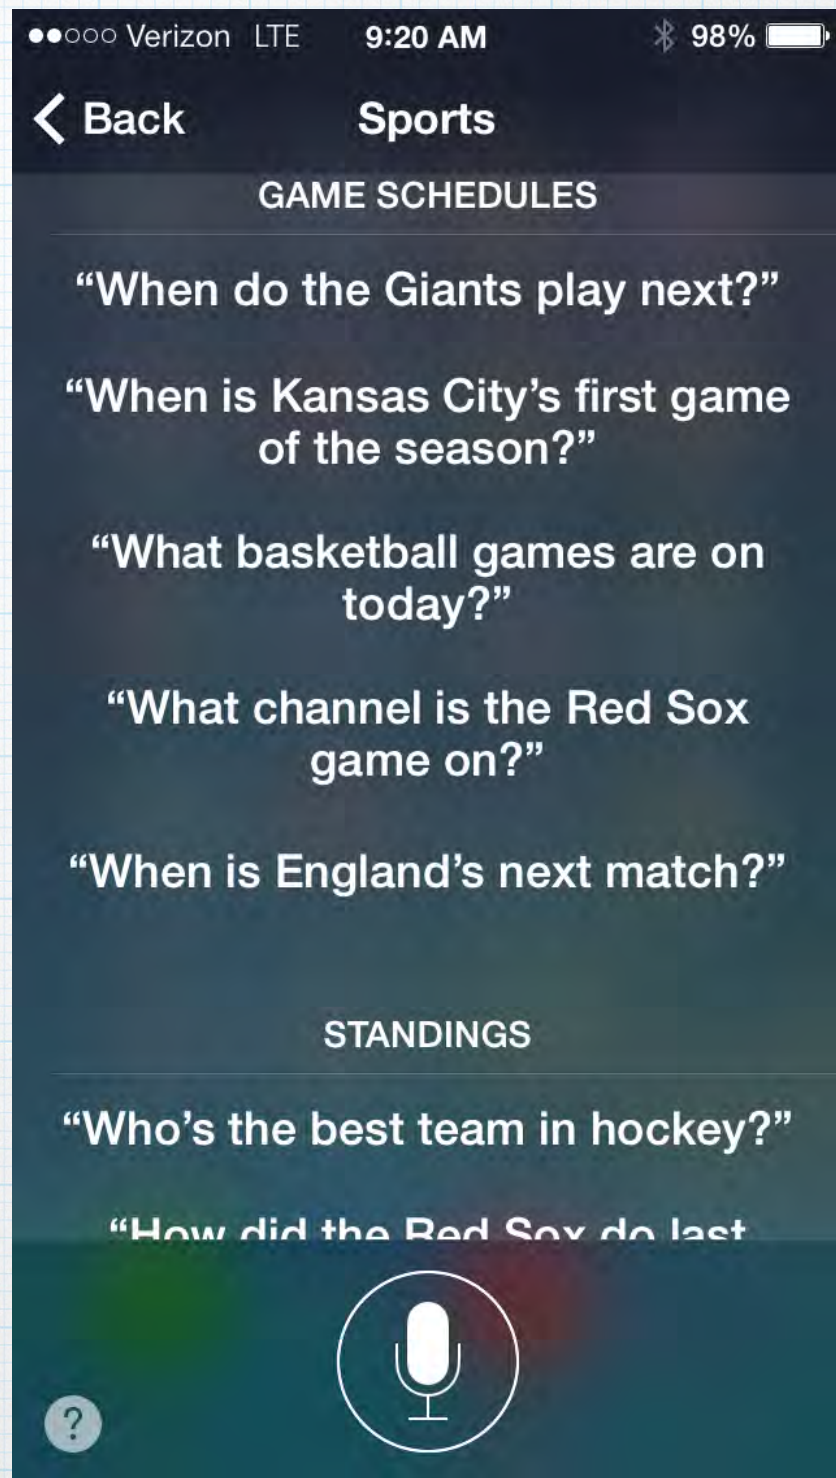

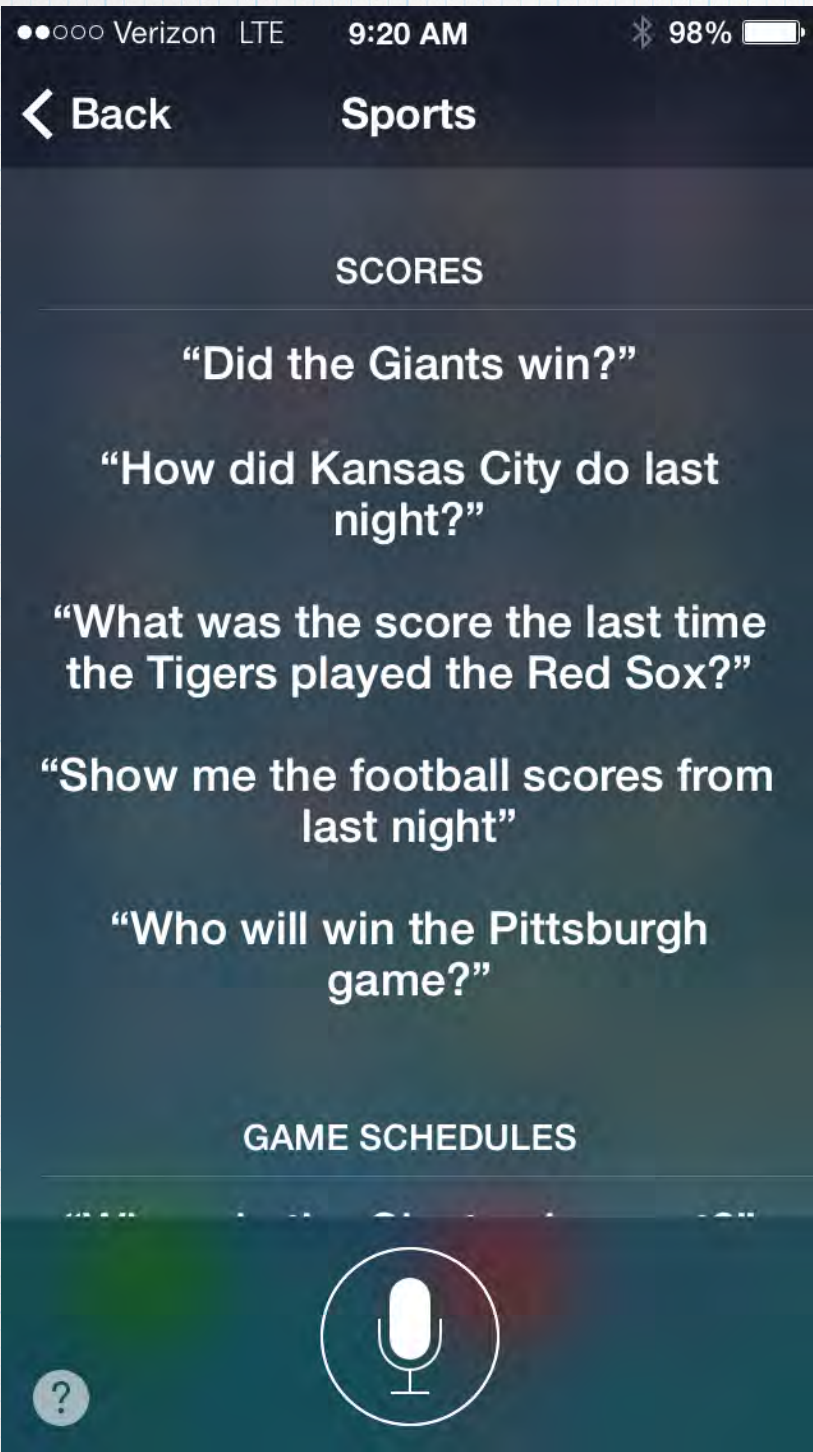

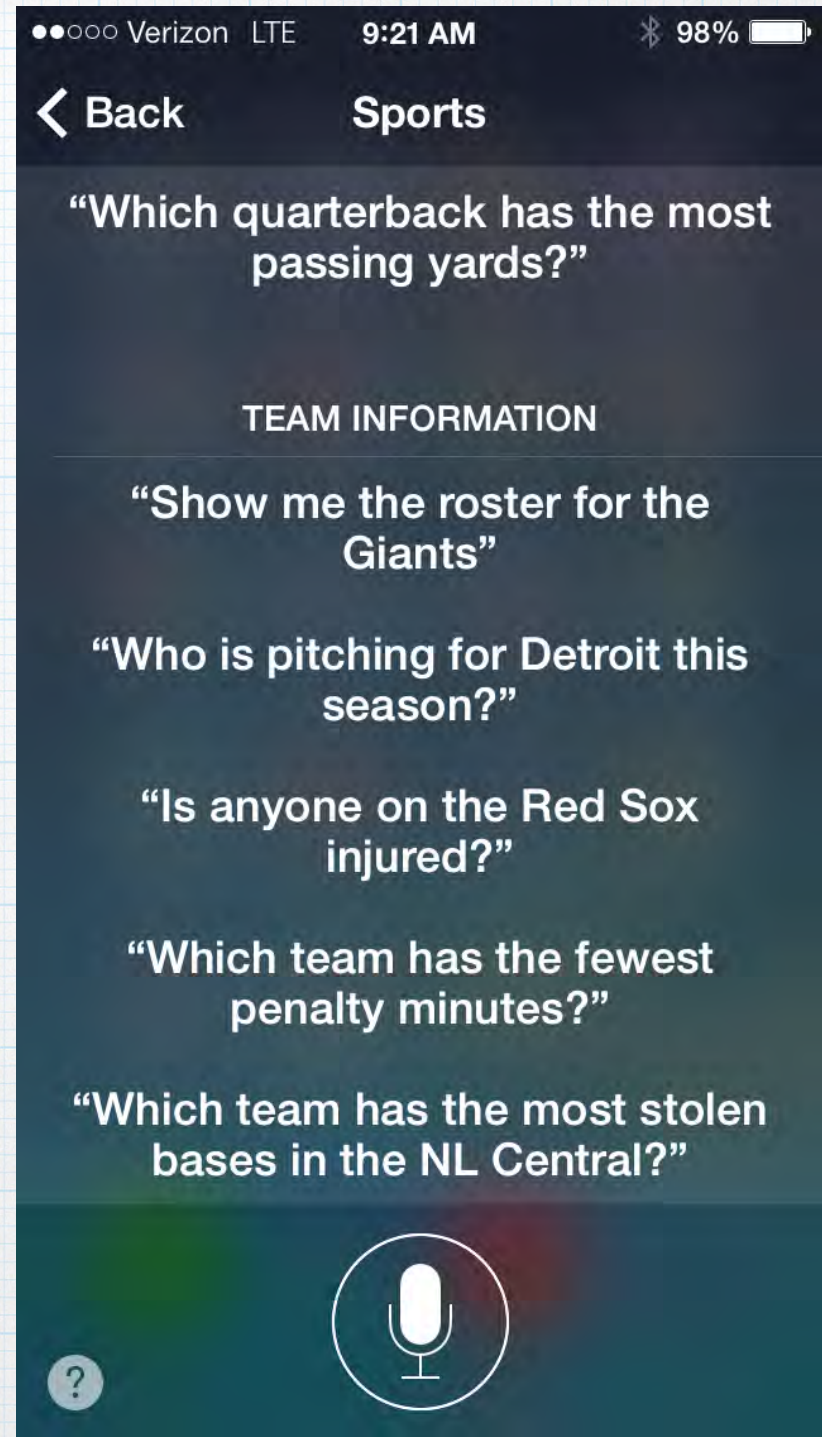

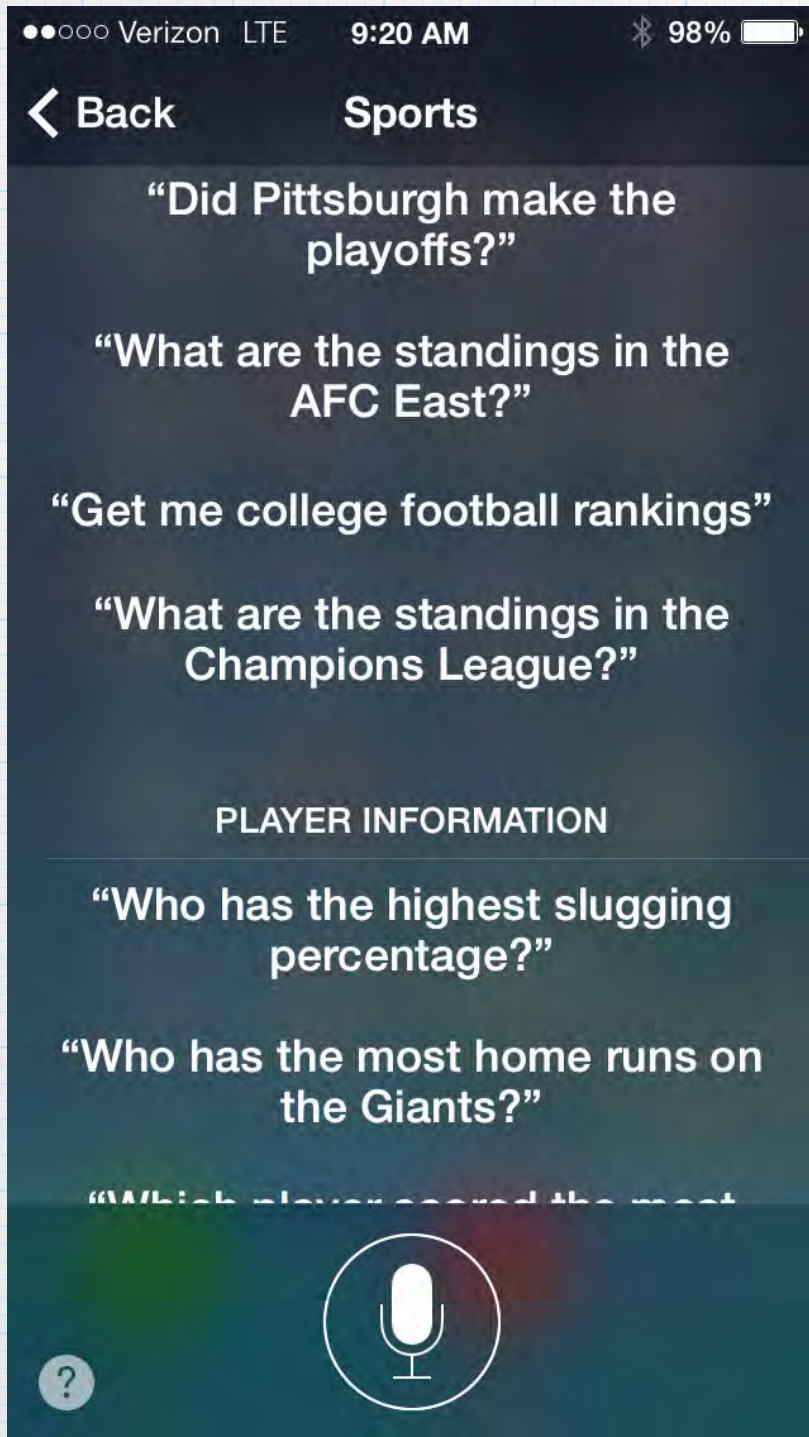

to open Siri and then  
click on the ? mark.

Click on the ?  
mark and Siri  
gives you a list  
of suggestions.  
Click on any one,  
like Sports, and  
Siri suggests lots  
of questions you  
can ask.

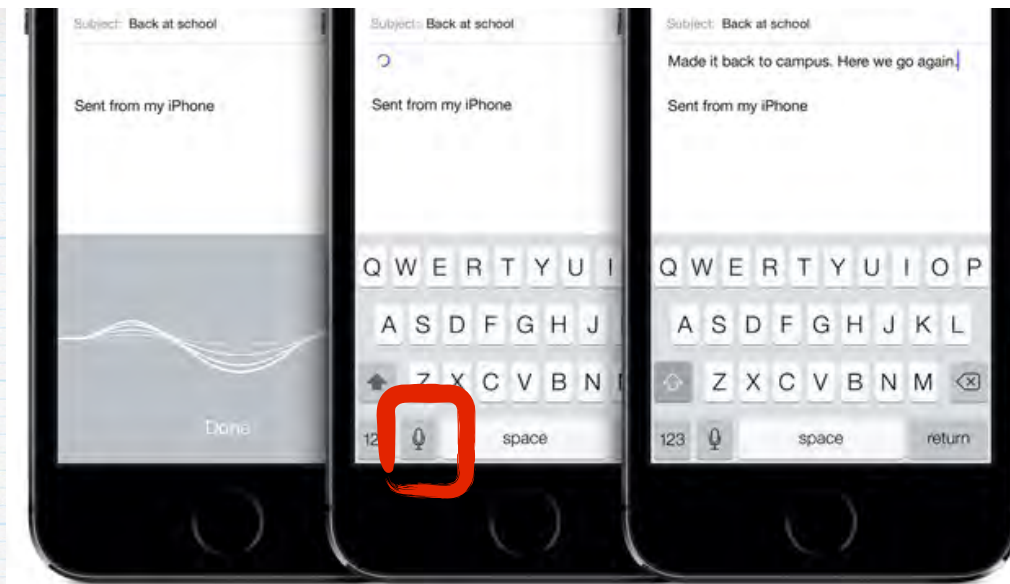

**Siri does not work on Macs.  
iOS Only (iPads and iPhones).  
But Macs & iOS both have a  
simpler version, Dictation.**

**With Dictation, instead of typing, tap the microphone icon on the iPhone keyboard. Say what you want to say and Apple listens. Tap done, and convert your words into text. Write messages, take notes, search the web and more.**

On a Macbook or iMac, turn on Dictation in System preferences. Then click the function (fn) key twice to start dictating.

# Devices Siri work with?

- \* iPhone 4S and all 5 models
- \* iPads with Retina Displays
- \* iPad Minis and iTouch 5

On a Mac, there is no Siri (yet)  
Voice Dictation only.
